## Foreword

This booklet is the second of a new series of OECD publications entitled “Making Integration Work”. The series summarises the main lessons from the OECD’s work on integration policies. The objective is to summarise in a non-technical way the main challenges and good policy practices to support the lasting integration of immigrants and their children in the host countries.

After a first booklet on the integration of refugees and others in need of international protection, this second booklet takes stock of the experiences of OECD countries in the assessment and recognition of foreign qualifications. It summarises this along ten main policy lessons with supporting examples of good practice. It also provides a comprehensive comparison of the policy frameworks that govern policy strategies for the assessment and recognition of foreign qualifications in OECD countries. Information about the different policy frameworks was gathered through a questionnaire sent to all the countries.

Further booklets will cover the integration of young people with a migrant background, the integration of family migrants and language training for adult migrants.

## Acknowledgements

This booklet was written by Karolin Krause (Consultant to the OECD) and Anne-Sophie Schmidt from the OECD's International Migration Division together with Thomas Liebig (OECD). It benefitted from comments from Jean-Christophe Dumont (OECD), Mark Pearson (OECD), Stefano Scarpetta (OECD) and Dirk van Damme (OECD). The OECD developed this booklet with support from Germany (the Federal Ministry for Family Affairs, Senior Citizens, Women and Youth), Norway (the Ministry of Children and Equality), Sweden (the Ministry of Employment) and the King Baudouin Foundation in Belgium. This work would not have been possible without the support of the members of the OECD's Working Party on Migration and the national authorities in charge of recognition of foreign qualifications and integration policy, who willingly shared their knowledge of national policy frameworks and programmes.

## Introduction

### *Why is the assessment and recognition of foreign qualifications an important issue?*

OECD-wide, almost two out of three immigrants have obtained their qualifications abroad. At the same time, a substantial body of research shows that immigrants with foreign qualifications face significant barriers to unfolding their skills potential. Highly educated immigrants with foreign qualifications have lower returns to their education in terms of employment prospects and wages than the native-born with domestic qualifications, regardless of age, gender and field of study. On OECD average, 27% of highly educated immigrants are not in employment and a further 26% are formally overqualified for their job, meaning that they work in jobs that require a lower level of formal education than what they were educated for.<sup>1</sup> Among highly educated immigrants with domestic qualifications, only 20% are not in employment and 18% are overqualified for their job (see Figure 1).

Part of the observed lower return to foreign qualifications is due to differences in the performance of education systems. For example, data from the OECD Survey on Adult Skills (PIAAC) shows that there are large cross-country differences in skills at given education levels (OECD, 2016b). Likewise, the OECD Programme for International Student Assessment (PISA) has shown that the outcomes of students at age 15 vary across countries. This and other evidence suggests that the quality of education systems differs widely, especially between high- and low-income countries. However, recent OECD work has shown that a discount is observed even after accounting for such differences (OECD/EU, 2014).

**Figure 1. Highly educated foreign-born either overqualified or not in employment, by country of qualification, 15-64 years old, 2013-15**

*Note:* FQ stands for foreign qualification; NQ for native (host-country) qualification; data for Germany is based on 2012-2013. Overqualified are persons who are tertiary-educated (levels 5 and 6 in the International Standard Classification of Education) but work in low- or medium-skilled jobs (levels 4-9 in the International Standard Classification of Occupations); see OECD/EU (2015).

*Source:* European Union Labour Force Surveys (Eurostat); US Current Population Surveys, March supplement.

An important distinction must be made between regulated and non-regulated occupations. In regulated professions and trades, where a specific registration, certificate or licence awarded by the relevant professional licencing body is generally required to protect public health and safety, holding a foreign qualification constitutes a particular barrier. Foreign qualifications are usually not accepted because training curricula and certification requirements vary strongly across countries. As a result, immigrants trained abroad cannot exercise these regulated professions unless they obtain a formal assessment and recognition of their qualification from the relevant licencing body.

In occupations that are not formally regulated, immigrants with foreign qualifications are formally eligible to apply. However, holding a foreign qualification presents an informal barrier even in these segments. Foreign credentials often do not send the same positive signals as domestic qualifications as employers are not familiar with the education and training system that they originate from. In addition, immigrant applicants are more likely than the native-born to lack domestic references or work experience, which adds to employers' uncertainty about their skills and competencies. To improve their chances to be hired for a

non-regulated job, immigrants can seek informal assessment of their qualifications in most countries.

Finally, having foreign qualifications assessed is generally required if migrants seek to pursue further studies in the host country or to carry an academic title.

### *There are various types of assessment processes and recognition outcomes*

OECD countries offer a variety of assessment types and possible outcomes, depending on the type of qualification and the purpose of the assessment (see Table A.1 in the annex for an overview of the outcome of recognition procedures in OECD countries).

- An *assessment* usually involves a review of a foreign qualification against a range of criteria including level and type of learning implied by the qualification; duration of a training or study programme; status of the issuing institution (or system); authenticity of supporting documents and equivalence with comparable domestic courses of training or study (see e.g. Guo, 2009). Specific criteria may vary across countries, professions and academic fields, or even provinces within one country.
- The term *recognition* generally refers to the formal acknowledgement that a foreign qualification is equal to a domestic study or vocational training diploma. Where the recognition process is regulated by law the outcomes can be legally binding (i.e. in the case of regulated professions). Where the recognition process is not regulated by law, recognition usually takes the form of a non-binding evaluation that generally places the foreign diploma within the context of the domestic education or training system. Instead of a formal recognition, applicants obtain a certificate of equivalence indicating which domestic qualification their diploma/training corresponds to. Such certificates are usually issued without further requirements and can be presented to potential employers in non-regulated professions. Where recognition of higher education diploma is not sought for professional purposes but in order to pursue further studies, recognition is generally carried out by higher education institutions, who may decide to admit foreign students or exempt them from parts of a study programme based on qualifications obtained abroad. Higher education institutions tend to be largely autonomous in making this decision, although their verdicts may be informed by a previous assessment through a central recognition body or a central database.
- If immigrants do not fulfil all requirements of a full recognition, they may be able to obtain a *partial recognition*, certifying present skills and identifying

gaps. A partial recognition may recommend that the applicant passes an examination or participates in a bridging course in order to acquire the missing skills. A partial recognition can also mean that the applicant obtains certification of a lower-level degree.

- Finally, some OECD countries offer measures for the *Recognition of Prior Learning* (RPL). RPL measures complement procedures for the assessment of formal qualifications by focusing on non-formal and informal competencies, that is knowledge and skills gained outside of structured programmes in the contexts of short courses, work experience, leisure time activities or volunteering. RPL often leads to a certificate that appraises and validates the applicants' skills and strengths, and identifies areas for improvement (see Table 4c for an overview of the outcome of RPL procedures in OECD countries).

### ***There are evident benefits to having a foreign qualification recognised***

Recognition improves the labour market prospects of immigrants, regardless of their migration category, field of expertise, or the origin of their degree (Damos de Matos and Liebig, 2014; Liebig and Huddleston, 2014; Brücker et al., 2015). Data from selected European OECD countries suggest that immigrants who obtained formal recognition are more often employed and work in better jobs than their peers whose applications were not successful, or the large majority of migrants who never underwent an assessment process in the first place. The observed differences in over-qualification rates between the native-born and foreign-born are significantly lower for immigrants who applied for recognition (see Figure 2). The improvement associated with recognition is particularly pronounced for immigrants from lower-income countries, where education systems often tend to perform less well. At the same time, employers may face higher levels of uncertainty when assessing the value of qualifications from such countries, making an official recognition particularly informative of the real value.

The majority of immigrants who apply for recognition succeed in obtaining either full or partial recognition (see Figure 3). Nevertheless, only few immigrants use existing recognition mechanisms. Among immigrants with tertiary education in European OECD countries merely 38% have applied to have their qualifications recognised in the host country (Figure 3). Overall, immigrants who came to the host country to study are more likely to apply for recognition than labour, family and humanitarian migrants. Among those who apply, those with qualifications in the health and welfare sector are clearly overrepresented, followed by persons with qualifications in teaching, training and education.

### *The purpose of this publication*

The issue of recognition of foreign qualifications has received considerable attention in recent years. Across the OECD, much has been done to facilitate the transferability of foreign qualifications and skills including, most recently, for educated refugees arriving from war-ridden zones in the Middle East and Africa (OECD, 2016a). The possibility to have foreign qualifications recognised now exists almost everywhere in the OECD. However, in many member countries the process can be a long one and, involving many actors, can be off-putting in its lack of transparency. Recent policy development in the field of qualification recognition has therefore focused on speeding up the process, streamlining the recognition system and raising awareness of recognition procedures.

Nevertheless, a range of barriers to existing recognition mechanisms remain, explaining why still only relatively few immigrants use assessment offers. This booklet identifies these barriers and presents ten lessons about effective tools and components of recognition policy that policy makers can use to raise the benefits of recognition for immigrants, employers and origin countries. The policy tools presented in this booklet tackle issues of recognition whilst addressing other related factors at the same, thus providing a comprehensive and holistic approach to recognition and integration policy. Although assessment and recognition procedures are often undertaken for the purpose of further education in the host country, the focus of this publication is on the labour market.

## Lesson 1

Establish a right to the assessment of foreign qualifications

**WHAT and WHY?** Recognition procedures have been established in almost all OECD countries but not everywhere *all* immigrants have access to them. Eligibility to recognition procedures may depend on the legal status of a person. Alternatively, the right to recognition may be

determined by the type of qualification or by the country in which a qualification was obtained. Establishing a universal right to the assessment of foreign qualifications in regulated and non-regulated professions opens up recognition procedures to all migrants.<sup>2</sup>

**WHO?** A legal claim to the assessment of foreign qualifications should extend to any holder of a foreign diploma, regardless of their country of origin and training, place of residency, field of study or type of training. This is commended by principles of equal treatment and by the fact that qualifications (alongside informal skills) should be the only valid and decisive factor regulating access to the domestic labour market.

**HOW?** The right to an assessment of foreign qualifications should be integrated into a comprehensive recognition law to ensure that assessment procedures and criteria are transparent, that the responsibilities of different assessment authorities are well co-ordinated, and that the processing time for applications is limited. It is worth noting, however, that with any such law, there is a risk that the right to an assessment may be confused with the right to actual recognition. Therefore, it is important to manage public expectations and to clarify what a recognition act can do and what it cannot do.

Across the OECD, it is possible to have at least certain types of foreign qualifications recognised.<sup>3</sup> Moreover, the vast majority of countries have established a legal right to such an assessment. However, this right is frequently limited to particular groups of immigrants or types of qualifications (see Table 1). This is for example the case where the right to an assessment of foreign qualifications derives mainly or entirely from international acts, such as the Directive 2013/55/EU of the European Parliament and the Council of 20 November 2013 on the Recognition of Professional Qualifications.<sup>4</sup> The directive, which facilitates recognition of foreign qualifications among EU and EEA member countries, is limited to regulated professional qualifications and does not cover non-EU qualifications, except for those already recognised in another EU/EEA country when their holder has worked at least three years in the other EU/EEA country. A further common legal source is the Lisbon Recognition Convention, which has been ratified by 53 countries

including Australia, Israel, New Zealand and all European OECD countries except Greece. The Convention establishes a right to an assessment of higher education that was obtained in one of the signatory countries or is held by refugees. In reverse, it generally does not cover most types of non-tertiary education qualifications and does not apply to migrants with qualifications from non-signatory countries, who migrated for other than humanitarian reasons.

Some countries have attempted to close these gaps by putting in place comprehensive national legislation on recognition. A case in point is Germany. Before the German *Recognition Act* came into force in 2012, access to recognition procedures was often restricted to German nationals, EU citizens, or Ethnic Germans. The recognition process was fragmented and lacked offers for holders of foreign vocational diploma. The “Recognition Act” established a legal right to the evaluation of approximately 350 qualifications in non-regulated professions (i.e. skilled trades in Germany’s dual system according to the Vocational Training Act, and craft trades), and of regulated professions under the auspice of the federal government, covering everybody regardless of nationality. The Act, whose implementation has been monitored on an annual basis since 2012,<sup>5</sup> thus made assessment and recognition offers more accessible and equitable.

Likewise, in Denmark, the *Assessment of Foreign Qualifications Act* entitles all holders of foreign qualifications to an assessment through the central recognition agency. Even immigrants who do not formally require recognition (i.e. because they intend to work in a non-regulated profession) are encouraged to use this offer. Austria has recently put in place a similarly comprehensive legal framework for the assessment of foreign qualifications (see Table 1).

Canada, on the other hand, which lacks national legislation on recognition, features a Pan-Canadian Framework, under which federal, provincial and territorial governments work together and in collaboration with regulatory, credential assessment bodies and educational institutions to improve the fairness, transparency, timeliness and consistency of recognition processes in targeted regulated occupations. In addition, some Canadian provinces have established “Fairness Commissioners” through legislation, who work to ensure fair access for qualified individuals to regulated occupations and trades (see Lesson 6).

**Table 1. Legal right to an assessment of formal foreign qualifications in OECD countries, 2016**

	Legal right to an assessment of foreign qualifications

Note: "n.a." = information not available; "/" = not applicable.

1. The Asia-Pacific Regional Convention on the Recognition of Qualifications in Higher Education seeks to ensure that studies, diplomas, and degrees in higher education are recognised as widely as possible, considering the great diversity of educational systems in the Asia-Pacific region. It covers higher education qualifications and qualifications giving access to higher education that were obtained in one of the signatory countries. Australia, China and New Zealand have ratified the Convention.

2. The Lisbon Recognition Convention establishes a right to an assessment of higher education that was obtained in one of the signatory countries or is held by refugees. In reverse, it generally does not cover non-tertiary education qualifications and does not apply to migrants with qualifications from non-signatory countries who migrated for other than humanitarian reasons. The Convention applies to recognition of qualifications required for admission to higher education and to recognition of part of (units or courses constituting part of) higher education study programmes.

3. Directive 2013/55/EU of the European Parliament and of the Council of 20 November 2013 amending Directive 2005/36/EC on the recognition of professional qualifications facilitates recognition of foreign qualifications among EU and EEA member countries. It covers regulated EU/EEA professional qualifications held by EU/EEA nationals and their families. Under certain conditions, specific groups of non-EU/EEA migrants, such as scientific researchers, EU Blue Card holders, long-term residents and refugees enjoy the same rights as EU nationals with regard to the recognition of diplomas, certificates and other professional qualifications.

4. The México Convention on practice of liberal professions was signed by Bolivia, Chile, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua and Perú.

5. In Italy, a Statement of validity (Dichiarazione di Valore - DV) is an official document in Italian language that provides a short description of a given academic or professional qualification awarded by an institution located outside of Italy and belonging to an educational system different from the Italian one. A DV may also provide information about the validity of the qualification concerned in the awarding country. DVs are issued by the competent Italian diplomatic authorities abroad, i.e. the Italian Embassy/Consulate closest to the city or town where the awarding institution is located.

## Lesson 2

Make sure that recognition procedures are quick and provide opportunities to assess foreign qualifications prior to arrival

**WHAT and WHY?** The earlier immigrants get their foreign qualifications assessed and recognised, the earlier they can enter those segments of the labour market where their skills are most needed. Where recognition procedures are too long migrants remain out of employment or overqualified for long periods. This bears the risk of scarring effects and depreciation of their professional skills.

Several OECD countries have therefore taken steps to speed up the recognition procedure, including through the introduction of statutory processing times for the assessment of foreign qualifications (see Table 2a). Most even offer prospective migrants the possibility to have foreign qualifications assessed prior to arrival, although in the few countries where such data are available the share of applicants who uses this option is relatively low (see Table 2c).

**WHO?** Fast recognition procedures are beneficial for all migrants with foreign qualifications. They are also appreciated by employers, many of which need to fill shortages quickly. Prior to arrival recognition is important in regulated occupations if recruitment of foreign workers is to play a role in responding to skills shortages. In countries with long-standing skilled migration schemes, such as Australia and Canada, but also in New Zealand, assessment of qualifications is in fact a prerequisite for labour migrants who intend to apply through the points-based systems.

**HOW?** The vast majority of OECD countries have fixed the maximum admissible processing time for recognition of foreign qualifications in legislation. In the European OECD countries such legislation usually derives from the Directive 2013/55/EU on the Recognition of Professional Qualifications and the Lisbon Recognition Convention. In line with these instruments, the maximum period is commonly set between three and four months and applies to those types of qualifications and persons that are covered by the two legal instruments, respectively (see Lesson 1 and Table 2a).<sup>4, 6</sup> In addition to this, a few countries have introduced limits at the national level, ranging from seven days for recognition of qualifications covered by mutual recognition agreements in Poland to six months for recognition of certain targeted regulated professions in Canada (see Table 2a).

Comprehensive information about actual processing times is not always available. In those countries where it is available average processing times differ significantly across level of qualifications, type of professions and institutions that carry out the

recognition procedure. While the bulk of recognition procedures take between one and three months, processing times may range from less than a week in some specific professions to almost a year in certain regulated professions in the health sector (see Table 2b). Generally, recognition of qualifications in regulated professions is more time-consuming than recognition in non-regulated job segments due to the fact that full recognition in regulated professions frequently requires applicants to complete competence tests or additional training periods.

A novel approach to speed up recognition procedures in such cases is the Swedish fast-track scheme, which was developed to accelerate the entry of skilled immigrants into shortage occupations such as engineering, teaching, technical occupations and the medical profession. The goal of the fast-track initiative is to combine recognition of foreign credentials and prior learning with trade customised bridging education – including vocational Swedish – to provide an occupational certificate. Tripartite fast-track discussions are currently ongoing in 14 sectors covering 20 different professions (see Lesson 5 for further detail).

Where foreign qualifications are assessed prior to arrival, skilled-migration systems can prioritise applicants whose qualifications are transferable and meet the skills needs of domestic employers. Disposing of a recognised diploma upon arrival means that skills can be activated without delay, which fastens labour market integration of new labour migrants. Where immigrants fail to obtain full recognition prior to arrival, they can invest in targeted additional training or work experience to obtain critical missing skills, before reapplying for recognition at a later point. Evidence from Australia suggests that pre-migration screening of credentials improves the chances of being employed within six months of admission, especially for nationals of developing countries (Schuster et al., 2013).

Australia pioneered the pre-arrival assessment of foreign qualifications in 1999. Key providers have since included Trade Recognition Australia (TRA) which runs the Australian Offshore Skills Assessment Programme and VETASSESS, Australia's leading vocational education and training (VET) assessment provider with dependencies in more than 20 countries. A range of regulatory bodies for individual professions such as engineering, accounting or health also carry out pre-arrival assessments. Canada, too, attempts to speed up recognition procedures by providing relevant information, self-assessment tools and exam preparation material to internationally trained individuals prior to arrival. To accelerate the licensure process in Canada, many occupations have offshore exams capacity. Moreover, several regulated occupations (e.g. physicians, nurses, architects) have taken a further step and introduced or are in the process of preparing not only

pre-arrival assessment procedures but also pan-Canadian, pre-arrival registration systems.

In New Zealand, prospective labour migrants must pass through a two-tiered system for the recognition of their foreign qualifications prior to arrival. In order to enter New Zealand’s Skilled Migration Scheme, applicants first submit an “expression of interest” including a pre-assessment of educational credentials. If they receive a job offer under the scheme, applicants may submit a full application and pass a full International Qualifications Assessment that compares their qualification with the New Zealand Qualifications Framework (NZQF). The result of this assessment contributes to the selection process and the number of points they are awarded under the points-based system.

A prime example of an innovative approach to assess qualifications prior to arrival is provided by Norway which, in 2014, launched a “turbo evaluation” to help employers evaluate job applicants with foreign higher education credentials in non-regulated professions (see Box 1).

Several further countries now provide options to have foreign qualifications assessed prior to arrival, although this option is sometimes subject to certain conditions. In most countries where data is available only a relatively small share of applicants uses this channel. An exception is New Zealand, where about half of applications come from offshore. In Switzerland, where the option to apply for recognition prior to arrival is restricted to EU/EEA nationals, prior to arrival assessment is the norm, with 95% of all requests being filed from abroad (see Table 2c).

### **Box 1. Norway’s turbo evaluation for employers**

Norway has established a fast track “turbo evaluation” for employers in 2014, helping them to evaluate job applicants with foreign higher education credentials in non-regulated professions. Interested employers fill in an online application form containing the applicant’s education credentials, his or her CV and written authorisation. The online-based procedure is free of charge and verifies within five working days the discipline of the applicant’s qualification, whether or not the education is accredited in the country in question and whether or not the qualification is equivalent to a Norwegian degree. The evaluation is not legally binding and only for the respective job.

### Lesson 3

Facilitate information and application through one-stop-shops for the assessment and recognition of foreign qualifications

**WHAT and WHY?** Recognition systems can be opaque and difficult to navigate. In many OECD countries, recognition of foreign qualifications involves a range of actors and authorities. Procedures often vary across different regulated professions, levels and types of qualification and regional or provincial legislations. “One-stop-shops” offer multiple

services related to the assessment and recognition of foreign qualifications in one place. They reduce the complexity faced by applicants as they manage and co-ordinate assessment processes “behind the scenes”. In doing so, one-stop shops improve the accessibility and transparency of the system and reduce procedural barriers.

**WHO?** By nature, one-stop-shops should serve the needs of anybody seeking to apply for assessment and recognition of a foreign qualification, regardless of the type and level of qualification and of whether a person seeks recognition to facilitate job search, to gain access to a regulated profession, or to enter higher education. One-stop-shops can be particularly helpful for immigrants who are unfamiliar with the domestic bureaucracy, or who face difficulty accessing and using information about recognition pathways.

**HOW?** One-stop-shops are an important source of initial help and advice for immigrants seeking information about recognition. Depending on the country, different forms of one-stop shops may be suitable to ensure that services are accessible by all migrants. In small countries where migrant populations are concentrated in urban agglomerations, walk-in offices that group together all relevant services under one roof can be a suitable format. In larger countries, on the other hand, where migrant populations are distributed over the whole territory, spreading offices all over the country might be difficult. In this case, online tools combined with phone hotlines are an efficient solution ensuring that information is not only concentrated but also accessible for everyone across the country.

Many OECD countries maintain one-stop-shop information portals online that explain recognition requirements and procedures step by step, refer immigrants to the relevant recognition bodies, and provide application templates. Centres of this format exist for example in Austria, Canada, Iceland and in the Belgian region of Wallonia. More comprehensive one-stop-shops usually move beyond the mere provision of information and provide more extensive services. They accept initial

applications for the assessment of different types of qualifications and transfer these internally to the competent recognition bodies. They co-ordinate the relevant institutions, compile information and give advice to applicants, employers, recognition agencies and other stakeholders (including the government).

Denmark is among the OECD countries to provide such a comprehensive one-stop-shop. The Danish Agency for Higher Education co-ordinates different recognition authorities in the field of employment and higher education, maintains an online portal providing tailored step-by-step information for different types of potential applicants, and offers brief assessments resulting in a statement of equivalence that can be presented to employers. Similar centres exist for example in Finland, France, Latvia, Lithuania, the Netherlands and New Zealand (see Table 3a).

Sweden is another example of a country that has made substantial efforts to restructure and simplify the recognition of foreign qualifications. In 2013, it created a new co-ordinating body, the Swedish Council for Higher Education, which serves as a one-stop-shop for all types of qualifications and is responsible for the assessment and recognition of foreign upper-secondary, post-secondary, and tertiary education for labour market purposes in non-regulated professions and for teachers. The result of the institutional reorganisation has been that in 2014 the newly-created agency saw the highest number of requests for assessments of foreign qualifications that had ever been recorded in the country.

In Germany, the central government set up a multi-channel support structure to support the implementation of the Federal Recognition Act and help potential applicants navigate through the recognition procedure. The online portal “Recognition in Germany” and its online tool “Recognition Finder” refer applicants to the competent authority and provide information about the procedure in Arab, English, German, Spanish, Polish, Italian, Romanian, Turkish and Greek. Recently, the portal has been complemented by a recognition app, to be used on smartphones (see Box 2). Moreover, a telephone “recognition” hotline offers individual support in German or English. Between 2012 and 2015 the hotline received over 43 000 enquiries on recognition of which approximately a third came from abroad. On the ground, the 93 drop-in centres of the “Integration through Qualification (IQ)” network offer initial advice and direct individuals seeking recognition of professional qualifications to the relevant authorities. Finally, the Central Office for Foreign Education (ZAB) informs about and accepts applications for a Statement of Comparability of academic qualifications in non-regulated professions.

In the United States, responsibility for recognition of foreign qualifications is spread among multiple actors including institutions of higher education, employers and state boards of professional licensing. Most recognition procedures are performed by independent credential evaluation services, of which many are members of the National Association of Credential Evaluation Services (NACES). Established in 1987 in response to a lack of regulation and government standards, NACES provides the name and website information for all its member institutions on its website and enables individuals to choose from a network of evaluation services that are continuously screened and adhere to strict standards of professional ethics and good practices. It does not, however, accept applications for recognition. In addition, “Upwardly Global”, a US non-profit organisation that helps immigrant professionals to rebuild their career in the United States, developed Licensing Guides for a number of regulated professions. The guides help individuals with foreign qualifications understand all of the steps required to earn a state professional license or credential to return to the full practice of their profession. Guides are currently available for the states California, Illinois, New York, Michigan and New Hampshire and exist in ten different fields, including accountant, architect, dentist, engineer, IT professional, lawyer, nurse, pharmacist, physical therapist, physician, and teacher. The site also discusses options for pursuing alternative professional pathways.

To ensure that immigrants are informed about recognition pathways as soon as possible after they arrive some OECD countries have made assessing foreign qualifications an integral part of migrant introduction programmes (see Table 3b for an overview of the information channels on recognition used in OECD countries). In Canada, for example, referral services to have foreign credentials assessed are a systematic component in introduction activities for permanent residents, refugees, protected persons and live-in caregivers. In a similar fashion Denmark, Germany, Luxembourg, the Netherlands, Norway, Slovenia, Spain and Sweden inform new arrivals about recognition options in the framework of their introduction programmes.

The Swedish City of Malmö maintains a Centre of Validation where immigrants can prepare an individual “qualifications portfolio” as part of the general introduction programme for new arrivals. They take part in a step-by-step process that lasts several days and includes a detailed assessment of foreign credentials and occupational skills. At the end of this process immigrants either receive a validation certificate or are referred to a short-term upper secondary course leading to an upper secondary certificate. Immigrants can then present their qualifications portfolio to employers when looking for a job.

In Portugal, the High Commission for Migration (ACM) runs three National Support Centres for the Integration of Migrants that offer government and support services in the form of a one-stop-shop to facilitate immigrants' early integration. In the past few years, the three centres have developed special support services for the recognition of foreign qualifications.

Compared with recognition for the purpose of employment, recognition of education credentials for the purpose of entering or pursuing higher education in the host country can be somewhat less complex. In fact, in many countries, the recognition procedure is part of the regular institutional admission process. Students hence frequently apply directly with the higher education institution of their choice, which then evaluates their degree and communicates the outcome of this evaluation to the applicant as part of its admission decision.<sup>7</sup> Higher education institutions may also choose to consult a national recognition information centre, such as the NARIC offices established in many OECD countries. However, the education institution's admission office usually remains the contact and reference point for the applicant.

### **Box 2. Recognition in Germany – a smartphone app**

In early 2016, the Institute for Vocational Education and Training (BIBB) has developed the "Recognition in Germany App" on behalf of the German Ministry of Education and Research to provide easily-understandable information on:

- the recognition procedure itself
- requirements for recognition of foreign qualifications for work, higher education study, training or school attendance
- local information centres in proximity of the applicant

As a complement to the already existing multi-channel support structure on recognition of foreign qualifications in Germany, the app targets in particular young refugees, many of whom come with training or education from their home countries. The app is available for Android, iOS and Windows phones and provides information in Arab, Dari, Farsi, German, English, Pashto and Tigrinya. Most of the information is available offline; however, some features require internet access.

## Lesson 4

Strengthen systems for the Recognition of Prior Learning and ensure effective access for immigrants

**WHAT and WHY?** Measures for the Recognition of Prior Learning (RPL) give immigrants a chance to have their competencies systematically assessed and certified, regardless of how and where these skills have been acquired. The focus of RPL is on informal and non-formal learning that has been obtained through previous work experience or voluntary activities. As such RPL is

an important complement to the recognition procedures for formal qualifications discussed in previous lessons.

Although most OECD countries offer an RPL provision, immigrants do not always benefit from it. In France, for example, the share of immigrants among participants in RPL is estimated at less than 10%. This is unfortunate, as RPL is frequently the only way to ascertain the professional competencies of refugees with little or no formal schooling.

**WHO?** RPL measures help to prevent that those persons who acquired most of their skills through work-experience or who do not have a formal (or formally recognised) diploma are penalised in the labour market. However, it is also valuable for degree-holding humanitarian migrants who have no copy of their qualifications and are unable to supply alternative forms of documentary proof or could not terminate their studies before fleeing from war and conflict. Finally, RPL is a relatively quick and cost-effective means to identify individual needs for further training and to prevent the duplication of training content for migrants whose foreign qualifications are not found to be equivalent to domestic ones. In such cases, RPL can be incorporated into bridging programmes to allow migrants to fill the skills gaps that prevent them from obtaining a domestic degree or licence needed to exercise a particular occupation in the host country (see Lesson 5).

**HOW?** The possibility to have prior learning recognised exists nowadays – at least in certain fields or for specific purposes – in most countries across the OECD. In the majority of countries this possibility is even embedded in a legal framework for RPL (see Table 4a).<sup>8</sup> Norway, for example, has established a strong legal framework for RPL granting a legal right to undergo an assessment procedure of prior learning in primary and lower secondary, upper-secondary, post-secondary, tertiary vocational and higher education.

Assessments are usually carried out by the public employment service in collaboration with competent professional organisations and employers (see Table 4d). Methods of assessing prior learning vary from country to country and across professions. Typically, though, they are combinations of portfolios,

structured interviews, aptitude tests, exams and practical demonstration of skills via workplace observations, simulation scenarios or review of work samples (see Table 4b).

To ensure that employers and educational institutions accept RPL outcomes it is important that assessment criteria and reports are clear, transparent and consistent. This normally requires that RPL builds upon an established qualifications framework that maps skills, knowledge and competencies against occupational standards and formal learning outcomes. In Australia and Norway, for instance, RPL is informed by the respective National Qualification Frameworks. Similar procedures exist in Chile and Luxembourg. In Sweden, sector specific assessment models have been developed for RPL in co-operation with relevant industries in the framework of the fast-track scheme (see Lesson 5). Canada funds the development of tools, resources and training that promote consistency, fairness and quality standards in RPL services across the country. It works with immigrant serving organisation, academic institutions, regulatory bodies, and the private sector to encourage the effective uptake of these tools and resources.

Ideally, recognition of competencies acquired through non-formal or informal learning can lead to the award of a national qualification or a professional title. This is currently the case in a total of 16 OECD countries, where this is an option, at least in certain fields (see Table 4c). Where a national qualification cannot be awarded, RPL can generate a comprehensive roadmap of existing skills that immigrants can showcase to potential employers to send positive signals and reduce uncertainties about the value of their qualification. A prime example of such an approach is the Danish initiative “My competence portfolio”, a digital tool helping immigrants to developing competence portfolios (see Box 3).

For persons who wish to pursue further studies, it is usually possible to enter higher levels of education and training based on recognition of prior learning (see Table 4c). Where this is not possible, there is frequently the possibility to have at least certain parts of study programmes accredited, which may mean that an applicant can be exempted from certain study modules and complete a particular programme in shorter period of time based on RPL (see Table 4c).

To make sure that immigrants use RPL systems, it helps if the latter are well advertised and explained. Momentarily about half of the countries that run RPL systems provide systematic information about this option (see Table 4a). RPL measures are most likely to reach those who could benefit the most if bureaucratic hurdles are minimal and do not discourage applicants with limited proficiency in the receiving country language, low levels of literacy, awareness or

confidence. RPL must also be flexible enough to respond to the needs of specific target groups. For example, RPL procedures should not be too exigent in demanding documented evidence of competencies when dealing with immigrants, and humanitarian migrants in particular. Examples of countries with special RPL procedures for humanitarian migrants with no documentary proof of their qualification include Australia, Austria, Canada, Denmark, Finland, Germany, the Netherlands, Norway, Sweden and the United Kingdom (see OECD, 2016a).

In Germany, for example, a standardised procedure for RPL is currently developed in the framework of the pilot project VALIKOM in co-operation with the Chamber of Commerce and Industry and the Confederation of Skilled Crafts and Small Businesses. Canada has incorporated a focus on RPL in its labour market integration strategy in the recent Syrian refugee operation. In this context, many provinces and territories funded RPL projects in support of foreign qualification recognition for Syrian refugees.

### **Box 3. My competence portfolio – a digital tool for developing competence portfolios in Denmark**

Following an agreement on an action plan for Recognition of Prior Learning the Danish Ministry of Education has developed “My Competence Portfolio” (*Min kompetencemappe*) as an online tool enabling persons to create a systematic overview of their prior learning free of charge. The tool is available in Danish and English and allows persons to describe and document prior learning and previous education for various purposes including:

- Education/continuing education and training
- Recognition of competencies
- Job search

For example, immigrants may describe any relevant job experience and attach pictures of products or other outputs of their work. Once they have created a profile and filled in all information they can download a presentation of their portfolio and enclose it with a job application. Portfolio presentations can be customised to particular jobs, which means that users can select which items they want to include in a given portfolio in accordance with the job for which you are applying.

My competence portfolio can also be used by education institutions and there is a specific interface for education counsellors. Moreover, there is a specific portal for employers, who can use the tool for annual performance reviews or for planning their employees’ continuing education and training. The portal is currently being revised with a view to improve usability and customisation of workflow tools to strengthen immigrant’s self-reliance in the process of describing their skills. The updated tool will be available by the end of 2016.

**Table 4a. Recognition of Prior Learning (RPL) in OECD countries, 2016**

	Possibility to have prior learning recognised	Legal right to have prior learning recognised	Systematic information about the Recognition of Prior Learning
<b>Australia</b>	Yes	Yes	Yes (multiple active and passive information services provided by different government and non-government agencies)
<b>Austria</b>	Yes (several channels)	No	No
<b>Belgium</b>	<ul style="list-style-type: none"> <li>• Yes (in German speaking community and Flanders)</li> <li>• Yes for admission to higher education programmes (in Wallonia)</li> </ul>	Yes	No (In German-speaking community and Wallonia)
<b>Canada</b>	Yes	No (but newcomers are encouraged to undertake RPL assessments)	Yes (Canada’s settlement and employment service providers inform newcomers about and refer them to prior learning assessment services where available, and can also undertake RPL assessment as relevant for employment services)
<b>Chile</b>	Yes (National Labour Competency Certification System (ChileValora))	Yes	No
<b>Czech Republic</b>	Yes	Yes	Yes (counselling is provided across the country by NGOs, regional authorities and involved ministries; not yet systematic)
<b>Denmark</b>	Yes	Yes	Yes (municipal integration services and PES provide counselling which usually covers RPL procedures)
<b>Estonia</b>	Yes (Accreditation of Prior and Experiential Learning (APEL)/ Estonian Varasemate õpingute ja töökogemuste arvestamine (VÕTA))	Yes	No
<b>Finland</b>	Yes (for study purposes or completion of (specialist) vocational qualifications or parts of them)	Yes	Yes, but not proactively: information on study opportunities is available in three languages at <a href="https://studyinfo.fi/">https://studyinfo.fi/</a> (Studyinfo) and provided by education institutions.
<b>France</b>	Yes (Validation des acquis de l’expérience)	Yes	No
<b>Germany</b>	Yes via two channels: <ul style="list-style-type: none"> <li>• The “external students’ examination” gives applicants with work experience access to the regular final examinations for vocational degrees</li> <li>• A standardised procedure for RPL is currently developed in the framework of the pilot project VALIKOM)</li> </ul>	Yes	Yes (via a telephone hotline and regional drop-in centres of the Network IQ)

**Table 4a. Recognition of Prior Learning (RPL) in OECD countries, 2016 (cont.)**

	Possibility to have prior learning recognised	Legal right to have prior learning recognised	Systematic information about the Recognition of Prior Learning
<b>Greece</b>	Yes, but only in a few occupations (e.g. adult educators and trainers, staff of private security services and land loaders of the port)	Yes	No
<b>Hungary</b>	No	/	/
<b>Iceland</b>	Yes (raunfærnimat)	Yes	Yes (information material is available on websites and at venues that immigrants are likely to frequent such as employment offices, magistrates offices and educational centres that teach Icelandic to foreigners)
<b>Ireland</b>	Yes (for study purposes and for award of domestic qualifications)	No	Yes (but not pro-actively: provider institutions inform applicants upon request)
<b>Israel</b>	Yes (for the purpose of salary grading)	No	Yes (online in seven languages)
<b>Italy</b>	Yes (a national legal framework “Individuazione, calidazione e certificazione delle competenze” / “Sistema nazionale di certificazione delle competenze” is in place but its implementation at the national level is still at a pilot stage)	Yes	No
<b>Japan</b>	No	/	/
<b>Korea</b>	No	/	/
<b>Latvia</b>	Yes (for VET and higher education)	Yes	Yes (but not pro-actively: several public institutions provide information upon request)
<b>Lithuania</b>	Yes	Yes (in accredited vocational training and higher education institutions)	No
<b>Luxembourg</b>	Yes (a “validation procedure” exists at the level of secondary, VET and higher education); the procedure is integrated with the recognition procedure for formal qualifications)	Yes (for the level of VET and secondary qualifications)	No
<b>Mexico</b>	Yes	Yes	Yes
<b>Netherlands</b>	Yes (EVC “erkenning van verworven competenties”)	Yes	No
<b>New Zealand</b>	Yes [provided by individual training providers and Industry Training Organisations (ITOs)]	No	Yes (but not systematically)

**Table 4a. Recognition of Prior Learning (RPL) in OECD countries, 2016 (cont.)**

	Possibility to have prior learning recognised	Legal right to have prior learning recognised	Systematic information about the Recognition of Prior Learning
<b>Norway</b>	Yes (at all levels of education and training: “ <i>realkompetansevurdering</i> ”)	Yes (in primary; lower, upper and post-secondary; and higher education)	Yes (but not systematically: for non-EU migrants information is provided pro-actively in the framework of a mandatory civic integration course, for other migrant groups information is available upon request)
<b>Poland</b>	Yes	Yes	No (but higher education institutions may provide information)
<b>Portugal</b>	Yes (Recognition, Validation and Certification of Competences (RVCC)- Procedure for recognition of competences at non-tertiary level and Assessment Procedure for Recognition of Prior Learning for access to higher education programmes)	Yes	Yes (but not proactively: information about RVCC is provided upon request by Employment and Vocational Training Centres or at the Centres for Qualification and Vocational Teaching; information about RPL to access higher education is provided on an individual basis by higher education institutions)
<b>Slovenia</b>	Yes (for prior learning corresponding to vocational and professional qualifications in accordance with labour market needs and the Nat. Professional Qualifications Act)	Yes	No
<b>Spain</b>	Yes (for professional and VET qualifications)	Yes	Yes (but not pro-actively: general information and in some cases individual counselling is available upon request)
<b>Sweden</b>	Yes (for labour market purposes, in adult education and for admission to further studies and credit transfer procedures in higher education)	Yes	Yes (part of regular introduction scheme for newly arrived migrants)
<b>Switzerland</b>	No	/	/
<b>Turkey</b>	Yes (for vocational education)	Yes	Yes (information is available online and upon request)
<b>United Kingdom</b>	Yes	Yes	No

**Table 4b. Assessment methods used for Recognition of Prior Learning (RPL)  
in OECD countries, 2016**

<b>Assessment methods used for Recognition of Prior Learning</b>	
<b>Australia</b>	<ul style="list-style-type: none"> <li>• Comparison of a migrant’s evidence, experience and skills (including formal education<sup>1</sup> and work experience) against the relevant Australian qualification</li> <li>• Practical demonstration of skills</li> <li>• Technical interview</li> </ul>
<b>Belgium</b>	<p><i>In German-speaking community:</i></p> <ul style="list-style-type: none"> <li>• Theoretical exam in front of a jury “Jury Central” (for certain regulated professions)</li> <li>• Examination in different subjects in front of the examination board for secondary education in order to gain the university entrance qualification</li> <li>• Mastership examination if relevant professional experience can be proven (practical exam)</li> </ul> <p><i>In Wallonia:</i></p> <p>Assessment methods are at the discretion of higher education institutions</p>
<b>Canada</b>	<ul style="list-style-type: none"> <li>• Varies by occupation and province/territory but often an informal process involving an in-person interview and/or assessment of skills and references check (non-regulated occupations, if RPL is done by employers)</li> <li>• Challenge exams, demonstrations of skills, structured interviews, simulations and portfolios (regulated occupations or entry into academic programmes)</li> </ul>
<b>Chile</b>	Assessment of applicant’s performance against occupational performance standards of knowledge and behaviour based on the National Labour Competency Certification System (ChileValora) through accredited evaluators
<b>Czech Republic</b>	Standardised examination (in Czech language) according to an assessment standard of professional qualifications listed in the National Register of Qualifications
<b>Denmark</b>	Self-assessment, documentation, interviews, skills assessment which can include workplace assessment
<b>Estonia</b>	Varies (often a combination of interviews and self-assessment; sometimes tests and demonstration of skills)
<b>Finland</b>	Depends on the institution performing RPL
<b>France</b>	A combination of interviews and workplace assessments
<b>Germany</b>	<ul style="list-style-type: none"> <li>• Applicants can participate as external candidates in the regular exams for vocational training without prior formal training</li> <li>• Further components are currently developed in the project VALIKOM</li> </ul>
<b>Greece</b>	Theoretical and practical exams
<b>Iceland</b>	<ul style="list-style-type: none"> <li>• Interviews providing guidance and support</li> <li>• Gathering of documentation of previous learning</li> <li>• Self-assessment</li> <li>• Formal assessment of knowledge and skills</li> <li>• Assessment of hands-on skills</li> <li>• Formal documentation of real skills which are registered in an official database</li> </ul>
<b>Israel</b>	Verification of official documents of prior learning
<b>Ireland</b>	Identification of learning outcomes, mentoring and documentation, assessment , certification (each institution uses their own methodology of assessment against national standards)
<b>Italy</b>	Still in development
<b>Latvia</b>	<ul style="list-style-type: none"> <li>• Practical examination of skills required for vocational qualification (for VET)</li> <li>• Evaluation of documents justifying acquired competences by a commission of higher education institutions (for higher education)</li> </ul>

**Table 4b. Assessment methods used for Recognition of Prior Learning (RPL) in OECD countries, 2016 (cont.)**

Assessment methods used for Recognition of Prior Learning	
<b>Lithuania</b>	<ul style="list-style-type: none"> <li>• Theoretical knowledge assessment test and a practical skills assessment task (in vocational training institutions)</li> <li>• Procedural briefing, group or individual consultations and assessment (interview and assessment of document portfolio provided for the recognition procedure) (in higher education)</li> </ul>
<b>Luxembourg</b>	A tripartite jury evaluates applicants' evidence based description of their prior learning based on the learning outcomes of the comparable domestic qualification
<b>Mexico</b>	Written tests, oral and case study evaluations
<b>Netherlands</b>	<ul style="list-style-type: none"> <li>• Identification</li> <li>• Documentation (resume, e-portfolio, profile of prior learning)</li> <li>• Assessment (depends on institution and may involve interviews, workplace assessments, self-assessments)</li> <li>• Certification</li> </ul>
<b>New Zealand</b>	Depend on organisation conducting RPL assessment (may include a portfolio of learning, workplace assessment, skills testing)
<b>Norway</b>	Vary according to level and type of education or training (often a combination of practical tests and interviews, workplace assessments, self-assessments or online assessments)
<b>Poland</b>	A commission composed of teachers and the university dean evaluates knowledge and skills against the learning outcomes of a given programme based on a test of 15-30 questions on the subject matter and documents including e.g. proof of previous employment and CV
<b>Portugal</b>	<ul style="list-style-type: none"> <li>• Portfolio construction, self-assessment and evaluation instruments incl. portfolio analysis sheet, technical interview guide, observation in the workplace and certification of skills through evidence (for Recognition, Validation and Certification of Competences (RVCC) of competencies at non-tertiary level)</li> <li>• Under the discretion of higher education institutions (if RPL is performed to access a higher education programme)</li> </ul>
<b>Slovenia</b>	Depend on the profession (e.g. oral or written assessment, practical assessment including task implementation in a simulated workplace environment, validation of documents)
<b>Spain</b>	Creation of a portfolio, interviews, work-place based observations, simulations or standardised tests (depending on the applicant's profile)
<b>Sweden</b>	Varies by the recognising education institution (PES uses sector models including self-assessments, theoretical tests and workplace assessments)
<b>Turkey</b>	Written exam, interview and practical exam

Note: n.a. = information not available; / = not applicable.

1. In the Australian context, RPL is a defined term that involves not only recognition of informal and non-formal but also of formal learning (for further information see <http://www.aqf.edu.au/wp-content/uploads/2013/06/RPL-Explanation.pdf>).

Source: OECD questionnaire on the assessment and recognition of foreign qualifications 2016.

**Table 4c. Outcome of Recognition of Prior Learning (RPL) in OECD countries, 2016**

	<b>Documents resulting from Recognition of Prior Learning</b>	<b>Possibility to enter higher levels of education and training based on Recognition of Prior Learning</b>
<b>Australia</b>	<ul style="list-style-type: none"> <li>• Full Australian Qualification (if an applicant meets the full Australian qualification requirements)</li> <li>• Statement of attainment listing the individual units of competency (If an applicant does not meet the full Australian qualification requirements)</li> </ul>	Yes
<b>Belgium</b>	<ul style="list-style-type: none"> <li>• Formal diploma granting the same rights as any other holder of a comparable domestic diploma (in German speaking Community)</li> <li>• Admission to a higher education programme (in Wallonia)</li> </ul>	Yes (in German-speaking community and Wallonia)
<b>Canada</b>	Varies by occupation and by province/territory: <ul style="list-style-type: none"> <li>• RPL conducted by employers is often informal and may not result in any documents but rather in an offer of employment</li> <li>• Formal RPL processes may result in a document or certificate stating that the applicant fulfils the requirements for a Canadian academic credential, education programme or professional license (for regulated occupations)</li> </ul>	Varies (depends on educational institution, programme of study and degree being sought)
<b>Chile</b>	<ul style="list-style-type: none"> <li>• Certificate attesting that the applicant's competence meets the performance standards of a domestic occupational skills profile and skills portfolio documenting the findings of the evaluation process (for applicants whose skills are recognised as equivalent to a domestic qualification)</li> <li>• Skills portfolio identifying gaps in applicant's performance that must be improved to obtain certification (for applicants whose skills are not recognised as equivalent to a domestic qualification)</li> </ul>	Yes (but only in Higher Technical Training (CFT) institutions, not for academic studies)
<b>Czech Republic</b>	Certificate of recognition of professional qualification	Yes
<b>Denmark</b>	<ul style="list-style-type: none"> <li>• Document granting access to most formal education and training programmes</li> <li>• Document exempting from parts of a formal education and training programme and/ or giving access to individual tailored education and training programme</li> <li>• "Certificate of competence" leading to access/ exemptions in adult education and training programmes</li> <li>• "Education certificates" for parts of/ or a whole education programme on the basis of validation of prior learning</li> </ul>	Yes (in connection with upper secondary qualifications VET and higher education)
<b>Estonia</b>	Certificate recognising certain competencies	Yes
<b>Finland</b>	Depends on the institution performing RPL (e.g. accreditation of knowledge and skills towards a degree)	Yes in some cases (if this is the purpose of the RPL procedure)
<b>France</b>	Domestic diploma	Yes
<b>Germany</b>	Domestic degree (external candidates in regular vocational examinations receive the same certificates as regular candidates)	Yes
<b>Greece</b>	Vet- Certificates at different levels	No

**Table 4c. Outcome of Recognition of Prior Learning (RPL) in OECD countries, 2016 (cont.)**

	<b>Documents resulting from Recognition of Prior Learning</b>	<b>Possibility to enter higher levels of education and training based on Recognition of Prior Learning</b>
<b>Iceland</b>	A certificate stating the results of the assessment of prior learning	No (usually completion of formal education at an educational institution in Iceland is required)
<b>Ireland</b>	<ul style="list-style-type: none"> <li>• Portfolio listing the skills of an applicant</li> <li>• Domestic qualification</li> </ul>	Yes
<b>Israel</b>	Decision about salary grading	/
<b>Italy</b>	“Citizen’s training booklet” recording a person’s skills and competencies	No
<b>Latvia</b>	<ul style="list-style-type: none"> <li>• Professional qualification certificate (for VET)</li> <li>• Shorter period of study (for higher education)</li> </ul>	Yes (in higher education the outcome of RPL can allow participants to complete the equivalent domestic higher education programme in a shorter period)
<b>Lithuania</b>	<ul style="list-style-type: none"> <li>• Diploma or a right to continue studies in a vocational training programme (for vocational training)</li> <li>• Document certifying that a person has the relevant competencies (in higher education)</li> <li>• If a person wishes to gain a higher education qualification, a particular number of credits is awarded and relevant subjects or modules of the study programme are scored up</li> </ul>	Yes
<b>Luxembourg</b>	<ul style="list-style-type: none"> <li>• Certificate stating that the applicant fulfils the requirements for obtaining a domestic qualification</li> <li>• Document stating the missing elements to obtain a domestic qualification</li> </ul>	Yes
<b>Mexico</b>	<ul style="list-style-type: none"> <li>• Professional titles</li> <li>• Certificates of a specific educational level or grade (in secondary and higher education)</li> </ul>	Yes
<b>Netherlands</b>	<ul style="list-style-type: none"> <li>• Certificate of Experience “Ervaringscertificaat” (for employment purposes)</li> <li>• Exemption from a study programme or full domestic degree (in higher education)</li> </ul>	Yes
<b>New Zealand</b>	Depends on organisation conducting RPL assessment (some may issue a New Zealand qualification, others a statement of assessment)	Depends on organisation conducting RPL assessment
<b>Norway</b>	<ul style="list-style-type: none"> <li>• Lower secondary education certificate</li> <li>• Proof of competence / full or partial completion of specific study/training units</li> <li>• Certificate of completed upper secondary education; Trade or Journeyman’s certificate (if applicants have undertaken the relevant final examination)</li> <li>• Admission offer to a study/training programme</li> <li>• Diploma or specification in the final certificate of the units or modules obtained through RPL</li> </ul>	Yes
<b>Poland</b>	Decision on admission to study	Yes

**Table 4c. Outcome of Recognition of Prior Learning (RPL) in OECD countries, 2016 (cont.)**

	Documents resulting from Recognition of Prior Learning	Possibility to enter higher levels of education and training based on Recognition of Prior Learning
<b>Portugal</b>	<ul style="list-style-type: none"> <li>• Certificate of qualifications listing the applicant's skills and, if applicable, the level of the corresponding domestic qualification (for basic, lower-secondary, secondary and vocational education)</li> <li>• Access to a higher education programme (if RPL is performed by higher education institutions)</li> </ul>	Yes
<b>Slovenia</b>	Certificate of acquired national vocational (or professional) qualification	No
<b>Spain</b>	<ul style="list-style-type: none"> <li>• Accreditation of units of competence / professional modules</li> <li>• Full qualification (if accredited units of competences / professional modules accumulate to a domestic qualification)</li> </ul>	Yes
<b>Sweden</b>	<ul style="list-style-type: none"> <li>• Recognised occupational certificate (for labour market purposes if sector models are used)</li> <li>• Educational marks (in adult education)</li> <li>• Formal educational credits or full diploma (for higher educational purposes)</li> </ul>	Yes
<b>Turkey</b>	Qualification certificate based on occupational standards	No (but this will be addressed during the implementation of Turkish Qualifications Framework (TQF) over the next years)
<b>United Kingdom</b>	<ul style="list-style-type: none"> <li>• Statement of comparability and progression options</li> </ul>	Yes

Note: n.a. = information not available; / = not applicable.

## Lesson 5

### Link partial recognition to bridging courses

**WHAT and WHY?** Taking into account the discrepancy in the content and quality of education systems across countries, it is not surprising that a considerable number of individuals obtain a partial but not a full

recognition of their previous training abroad. Without adequate policy solutions, immigrants in such a situation may then have to repeat part or all of their training in the receiving country's education system to be entitled to work in their field and skill level. This often involves substantial costs in terms of time and money and can have lock-in effects that delay labour market integration and activation of skills. Effective bridging courses offer a fast-track and a cost-efficient solution out of this dilemma, enabling immigrants to fill specific skills gaps and obtain full recognition or even a host-country degree.

If they are effective, bridging programmes provide excellent value for money. A bridging programme for nurses in Australia, for instance, costs only 10% of alternative training offers that would be delivered through higher education institutions (Konno, 2006). If immigrants are well aware of bridging programmes and their benefits, this might also encourage them to apply for recognition, given that refusal could then steer them to such retraining offers.

**WHO?** Bridging courses are useful for all migrants, whose qualifications are not fully equivalent to a domestic degree. For immigrants trained in regulated professions they are a necessity as eligibility to exercise these professions is dependent on obtaining formal recognition. Most bridging courses are currently offered to health professionals as medical training pathways are heavily regulated and vary strongly from one country to another (see Table A.1). Further, there is a clearly acknowledged shortage in this field virtually everywhere.

**HOW?** To allow immigrants with partial recognition statements to quickly fill their skills gaps and obtain full recognition, partial recognition decisions should include a clear statement about which skills are missing and which additional training is needed. This is the case in most OECD countries where partial recognition is possible (see Table 5a). Bridging courses must then be made available in co-operation with professional bodies and/or educational institutions to prepare immigrants for licensing examinations and help them find traineeships and work placements, in order to eventually obtain full recognition.

Given that the outcome of individualised recognition is liable to be quite unique the resultant bridging requirements are unlikely to be fulfilled by any one specific course without substantial repetition. As a result, effective bridging courses are

tailored to the applicant's specific needs and follow an individual learning plan. To achieve this, the regulated professions in Germany, for example, are now co-operating with recognition authorities and educational institutions in order to divide the course work into several modules. These modules can then serve as an orientation to recognition authorities who are able to require candidates to attend only those modules relevant to the competencies that they are found to be lacking. The flexibility inherent in this modularisation enables a more individualised bridging offer that is able to avoid unnecessary repetition.

Even where bridging is modularised ensuring that migrants across the country have access to bridging offers adapted to their individual needs is not an easy task – in particular if migrants come from various different education systems, professional fields and with different skill needs. To facilitate sufficient supply and accessibility of bridging offers at a reasonable price, countries will have to develop flexible solutions including mobility schemes and distance-learning programmes. An example is the Canadian province of Ontario, where internationally educated nurses can prepare for licensure and receive an Ontario College Certificate via distance education and online learning.<sup>9</sup> Along similar lines, Sweden offers bridging courses for teachers, which can be partially undertaken via distance learning.

Ideally, bridging offers combine tailored professional training with language instruction, work experience and a mentoring scheme to provide immigrants with all the resources that they need to transfer their skills into the receiving country's labour market (see Table 5b for an overview on the components of bridging programmes in OECD countries).

Professional mentoring schemes are still relatively rare but are gradually developing in countries such as Austria, Norway and Switzerland, where they are part of active labour market policies, but not specifically linked to bridging courses. In Canada many bridging programmes include a mentoring component. One such programme is the Environmental Immigrant Bridging Program which targets experienced environmental professionals who have completed an assessment of their foreign qualification. The programme comprises 180 hours of training during which migrants are taught technical writing; environmental issues in Canada; and professional communication skills. They are encouraged to obtain work experience through an internship and benefit from a mentorship scheme, volunteering and networking events.

Bridging courses that include a vocational language component are particularly helpful for professionals lacking language skills who need to communicate with patients or clients using a technical or vocation-specific vocabulary. Portugal, for example, runs a programme for foreign-trained medical doctors since 2002, which

provides for the translation of documents, bridging courses in the faculty of medicine, comprehensive preparation material, internships in teaching hospitals, and vocation-specific language training. An evaluation of the programme, which is jointly operated by non-governmental organisations, the health ministry and a university, suggests that 106 of 120 participants found work in their profession. The cost of the nine-month programme was only a fraction of the average annual cost of medical training in the country (OECD, 2008).

An evaluation of bridging courses in Sweden suggests that it takes a strong consortium of delivery partners to design and implement effective bridging courses and that such initiatives are most effective where they culminate in the award of a domestic qualification that employers can easily interpret (Niknami and Schroeder, 2012). Building on this, Sweden developed a tripartite fast-track initiative, which combines trade customised bridging education (including vocational Swedish) with recognition of formal qualifications and prior learning and leads to the award of an occupational certificate or credential (see also Lesson 2). Programmes begin by mapping, validating and bridging the skills of participants in their mother tongue, while at the same time offering language tuition alongside these activities. A key difference with previous initiatives is that Swedish language skills, a requirement that, in the past, has substantially slowed down bridging and limited the number of eligible participants, will not be required prior to the commencement of validation and bridging efforts. In the teaching profession, for example, where the skills of up to 1 500 newly accepted refugees with experience as teachers are needed to help accommodate newly-arrived minors into the school, specific bridging courses at universities initially concentrate on Swedish pedagogy while building language skills alongside this process. At the end of the course, teachers continue their language studies alongside work by working four days a week in the classroom in their mother tongue, and devoting one day to Swedish language classes (Arbetsförmedlingen, 2016).

Canada, too, funds bridging programmes across the country that enable immigrants to work in the occupation for which they were originally trained and educated. In addition, Canada has developed an innovative approach to help those foreign trained professionals use their knowledge and skills in the labour market who do not have the time and resources to obtain licensure or who have not found a job in their occupation despite successful licensure. The “alternative career” pathway provides career options in jobs that require little or no upgrading upon arrival but that relate to the profession in which immigrants were originally educated and trained. This approach immediately uses the person’s transferable technical and soft skills, education and experience. For immigrants who plan but have not yet had their credentials assessed the alternative career approach can

also offer an interim employment option, allowing them to gain professional experience, learn work-related language, connect with employers and network alongside the recognition procedure (see Box 4).

#### Box 4. Work alongside bridging in Canada and Germany

Combining work and participation in bridging courses ensures that early contact with the labour market does not impinge upon the ability of qualified migrants to eventually enter employment in which they are able to use their skills and qualifications. One option is to provide early work experience within a field that is closely related to the subject area of the bridging material.

Since only 20% of immigrants in **Canada** in licensed occupations obtain a professional license in their field, Citizenship and Immigration Canada (CIC) has been working with partners to explore alternative careers. For some migrants alternative careers may become a satisfactory career choice in itself, while others may pursue them alongside efforts towards gaining the requisite license to practice in the occupation they were originally trained and educated for. Since 2013, CIC, together with Settlement service provider organisations and provincial and territorial counterparts, has worked with over 800 high skilled immigrants in various sectors including finance, biotechnology, health, accounting and engineering, to explore alternative career options and connect immigrants with employers. One example is the engineering profession:

##### Alternative careers: Non-regulated alternatives to engineering

###### Professional Engineers (Regulated)

Are required by law to assume professional responsibility for the design, research and development, commissioning and field review and construction of engineering projects.

###### Technologists (Non-regulated)

Apply theoretical and practical methods to design, plan, develop, test, manufacture, construct, install & commission engineered products, systems and services.

###### Technicians (Non-regulated)

Assist with the design, development, manufacturing, testing, construction, installation, commission, operation & maintenance of engineered products, processes, systems and services.

The model brings together stakeholders – government regulators, professional associations, educational institutions and employers – to provide information to internationally trained individuals on alternative career pathways, licensing practices and connects them with employers to discuss job options.

*Source:* Canadian Council of Technicians and Technologists and Canadian Technology Immigration Network (see: [www.engineeringcareerpathways.ca](http://www.engineeringcareerpathways.ca)).

In **Germany**, a model programme called Early Intervention, which has recently been anchored in legislation as a principle, assists certain asylum seekers with a high likelihood of being granted permission to stay to determine what their skills are, how these are relevant to different occupations and how to apply them in the labour market already during the asylum procedure. Migrants may then begin working in a job that requires a lower level of qualifications than the job for which they are formally qualified (for example as a nursing assistant rather than as a nurse) with the aim of moving into a more qualified position when they have attained fluency in German and have experience of the German nursing sector. Importantly, migrants are given the opportunity to study language alongside their initial position in order to ensure they progress towards their goal and do not remain stuck in a position for which they are over-qualified (Büschel et al. 2015).

**Table 5a. Bridging programmes in OECD countries, 2016**

	<b>Availability of bridging offers for immigrants with partial recognition of foreign qualifications</b>	<b>Systematic information about bridging offers for immigrants who obtained partial recognition</b>
<b>Australia</b>	Yes (for air conditioning or refrigeration mechanics, electricians, line workers, technical cable joiner and plumbers)	Yes (skilled migrants with an Offshore Technical Skills Record)
<b>Austria</b>	Yes (but not systematically and mostly for regulated professions)	Yes (provided by four regional contact points for recognition)
<b>Belgium</b>	No (in German-speaking community and Wallonia)	/
<b>Canada</b>	Yes	Yes (the Settlement Program provides pre- and post-arrival employment counselling to newcomers, which includes the provision of information related to recognition of prior learning and assessments services)
<b>Chile</b>	No	/
<b>Czech Republic</b>	No	/
<b>Denmark</b>	Yes	Varies (in regulated professions candidates with a partial recognition are informed by the competent authority about the courses needed in order to obtain an authorisation to exercise their profession, in other cases candidates need to inform themselves)
<b>Estonia</b>	No	/
<b>Finland</b>	Yes (but not systematic)	Yes
<b>France</b>	No	/
<b>Germany</b>	Yes	Yes (but not pro-actively; information is available via websites and information centres)
<b>Greece</b>	No	/
<b>Hungary</b>	No	/
<b>Iceland</b>	No formal bridging offers available (bridging is dealt with on a case-by-case basis)	No
<b>Ireland</b>	Not systematic (but education and training boards may provide bridging at local levels)	No (but migrants with declared skills obtain assistance to identify their needs)
<b>Israel</b>	Yes	n.a.
<b>Italy</b>	No	/

**Table 5a. Bridging programmes in OECD countries, 2016 (cont.)**

	Availability of bridging offers for immigrants with partial recognition of foreign qualifications	Systematic information about bridging offers for immigrants who obtained partial recognition
<b>Japan</b>	Yes (for nurses and caretakers from the Philippines, Indonesia and Vietnam based on EPA)	Yes
<b>Korea</b>	No	/
<b>Latvia</b>	No	/
<b>Lithuania</b>	Yes (for higher education qualifications in non-regulated professions)	Yes
<b>Luxembourg</b>	No	/
<b>Mexico</b>	Yes	Yes
<b>Netherlands</b>	Yes (at higher education institutions)	Yes (for immigrants who apply to higher education institutions)
<b>New Zealand</b>	No	/
<b>Norway</b>	Yes (but not systematically for all professions and programmes, well established in the health sector)	Yes (but not for all professions and programmes)
<b>Poland</b>	Yes	Yes
<b>Portugal</b>	Yes	Yes
<b>Slovenia</b>	No	/
<b>Spain</b>	Yes	Yes
<b>Sweden</b>	Yes (for teachers, medical doctors, nurses, dentists, veterinarians and lawyers; further measures are currently developed in 14 sectors covering 20 professions)	Yes (educational institutions and PES provide counselling on bridging measures)
<b>Switzerland</b>	No	/
<b>Turkey</b>	Yes (for bachelor degrees)	No
<b>United Kingdom</b>	Yes (not systematically but a rich suite of bridging and up-skilling programmes are available to immigrants)	Yes (for applicants wishing to pursue further studies or applicants seeking employment)

## Lesson 6

Ensure that regulatory bodies treat immigrants fairly

**WHAT and WHY?** In order to apply for recognition and to be admitted into a regulated profession, immigrants must usually approach the relevant professional regulatory body and follow its specific assessment criteria and procedures. This can be difficult for immigrants,

particularly when assessment criteria and procedures lack transparency. Things are often particularly complex for immigrants who are still residing abroad or for those who lack official documentation of their foreign qualifications, for example because they fled from war in conflict-ridden zones. These and other obstacles may place immigrants at a disadvantage over native-born applicants. To ensure that recognition practices in regulated professions and trades do not discriminate against immigrants with foreign qualifications but comply with principles of fairness and transparency “fairness commissioners” can act as a liaison between the immigrant and the assessment body.

**WHO?** Fairness commissioners defend the interests of any immigrant with foreign qualifications who considers applying for the assessment and recognition of a diploma to work in a regulated profession.

**HOW?** The fairness commissioner model was pioneered by the Canadian province of Ontario in 2006 (see Box 5). In the 1980s, Ontario had established a task force that examined requirements for the entry into regulated professions and concluded that immigrants trained abroad encountered systematic obstacles and barriers to recognition. These insights resulted in the Fair Access Act of 2006 which established a fairness commissioner in charge of dismantling such barriers by streamlining processes, improving information, and providing support. Since 2005, several other Canadian provinces including Manitoba, Quebec and Nova Scotia have followed suit and passed similar legislation. Denmark, Australia, and New York State are currently liaising with Ontario’s fairness commissioner to establish similar offices in the future.

In Belgium, the Federation Wallonia-Brussels and Wallonia have established the office of an ombudsman who addresses, although not exclusively, issues of foreign credential recognition. As such, the ombudsman treats complaints regarding accessibility of recognition services, processing times and unclear decisions. The office also assists applicants in identifying the competent recognition authority and forwards applications to the competent body. All services are free of charge.

Besides the establishment of specific fairness offices countries across the OECD have made efforts to render existing recognition procedures as accessible as

possible for applicants – regardless of where their diploma was obtained and whether or not they have proof of it. For instance, the vast majority of OECD countries have established alternative assessment procedures for refugees and other migrants lacking full documentation of their foreign degrees [see Table 6a below and OECD (2016) for an overview of good alternative assessment practices for applicants without documentation].<sup>10</sup> In addition, recognition authorities in several OECD countries now accept qualifications in various languages or provide subsidies for translation services where required (see Table 6b).

In the United States, the Massachusetts Immigrant and Refugee Advocacy Coalition (MIRA) promotes the rights and integration of immigrants and refugees via policy analysis and advocacy, institutional organising, training and leadership development, strategic communications, citizenship assistance and capacity-building for community-based organisations. Amongst others, MIRA’s work addresses the career barriers facing professionals with foreign qualifications in Massachusetts and helps them have their qualifications recognised or find new career pathways building on their advanced training and experience. For this purpose MIRA developed the initiative “Back to the Office”, which provides online resources offering information, training materials, and links to organisations that can help skilled immigrants as well as career advisors and educators better understand and navigate options for professional recertification and alternative career pathways. The initiative also offers career workshops for immigrant professionals and career advisors as well as programme development support to community-based organisations, career centres, job training agencies, and other groups to help them build their capacity to respond to the needs of this population. Moreover, MIRA works to shape policy and increase awareness at the regional and local level around the challenges and opportunities related to foreign-trained professionals, particular in medical fields.

#### **Box 5. The Office of the Fairness Commissioner of Ontario in Canada**

In 2006, the provincial Government of Ontario passed the Fair Access to Regulated Professions Act that requires regulated professions to have fair registration practices in place and established the Office of the Fairness Commissioner (OFC) to ensure that the professions comply with the law. The Fair Access Act grants applicants to regulated professions a number of rights, including the following:

- the right to obtain clear information about requirements, assessment criteria, processes and timelines;
- the right to timely decisions;

- the right to an explanation of the reasons driving the result of the assessment;
- the right to request a review or appeal;
- the right to a transparent, objective, impartial and fair assessment of their qualification by adequately trained assessors; and
- the right to access application records.

The OFC of Ontario has since been issuing recommendations to regulatory bodies to review and improve their registration practices in line with the Fair Access Act. The Office can request self-reviews from regulatory bodies, as well as reports and audits to gain insight into assessment criteria and processes. If regulatory bodies commit an offense against the Fairness Act, the OFC may issue compliance orders or impose a fine of up to CAD 100 000.

Other responsibilities of the OFC in Ontario include advising regulated professions on registration issues; specifying scopes and standards for audits and receiving audits; advising government ministries about issues relating to licensing and recognition practices, and reporting to the Minister of Citizenship and Immigration on a regular basis.

The OFC in Ontario share their insights through a number of stakeholder engagement activities. A study with 3700 applicants (holding both domestic and foreign qualifications) resulted in 17 specific recommendations issued by the Fairness Commissioner in 2013.

**Table 6a. Alternative assessment methods for applicants without (full) documentation of foreign qualifications in OECD countries, 2016**

	Alternative assessment methods for applicants without (full) documentation of qualifications	Type of alternatives
<b>Australia</b>	Yes	Statutory declaration and/or recognition of prior learning (e.g. practical demonstration, technical interview)
<b>Austria</b>	Yes (for humanitarian migrants)	Practical or theoretical exams, work samples or professional interviews
<b>Belgium</b>	<ul style="list-style-type: none"> <li>• Yes in certain regulated professions, for secondary qualifications granting access to universities and for professional qualifications (German-speaking community)</li> <li>• Yes but not systematically (in Wallonia)</li> </ul>	Examinations (a more comprehensive concept for the validation of all types of formal and informal qualifications is being developed)
<b>Canada</b>	Yes	Sworn statements before a legal authority; Recognition of Prior Learning (RPL); substantial equivalence; competency based assessments; expert validation; practical (on the job), oral and written assessments; verification with source country institutions or embassies
<b>Chile</b>	No	/
<b>Czech Republic</b>	Yes (except for professional qualifications)	Submission of an affidavit, recognition exam

**Table 6a. Alternative assessment methods for applicants without (full) documentation of foreign qualifications in OECD countries, 2016 (cont.)**

	Alternative assessment methods for applicants without (full) documentation of qualifications	Type of alternatives
<b>Denmark</b>	Yes	Background report describing the educational background of the applicant and indicating how the Danish Agency for Higher Education would normally assess a similar qualification if sufficient documentation was available
<b>Estonia</b>	No (but possibility to access vocational education)	/
<b>Finland</b>	Yes	Type of RPL called competence-based qualification procedure via skills demonstrations
<b>France</b>	No (but alternative assessment methods are being developed)	/
<b>Germany</b>	Yes	“Qualification Analysis” (including work samples, professional interviews or presentations)
<b>Greece</b>	No	/
<b>Hungary</b>	Yes (for refugees and asylum seekers)	
<b>Iceland</b>	Yes	Recognition of Prior Learning
<b>Ireland</b>	Yes	
<b>Israel</b>	Yes (on a case by case basis)	Decision by an inter-ministerial committee based on alternative documents (e.g. copies instead of originals) or affidavits that are signed by a lawyer
<b>Italy</b>	Yes (for humanitarian migrants on a case by case basis)	Support from the Foreign Ministry to obtain a statement of validity ( <i>Dichiarazione di valore in loco</i> )
<b>Japan</b>	No	/
<b>Korea</b>	Yes (for North Korean defectors or if the qualification is registered in the origin country)	
<b>Latvia</b>	No (but alternatives are being developed)	/
<b>Lithuania</b>	Yes	Reconstruction of the educational background validated through examination and/or interview
<b>Luxembourg</b>	No	/
<b>Mexico</b>	Yes (in special cases, e.g. for refugees)	
<b>Netherlands</b>	Yes	Indication of level of education ( <i>Indicatie Onderwijsniveau</i> )
<b>New Zealand</b>	Yes	Verification of copies (special arrangements apply for refugees under the United Nations Refugee Quota)
<b>Norway</b>	Yes (for higher education)	Recognition Procedure for Persons without Verifiable Documentation (“UVD-procedure”)
<b>Poland</b>	Yes (for refugees)	Confirmation of completion of higher education based on alternative forms of proof (e.g. transcripts, documents confirming acquired professional rights or previous employment)
<b>Portugal</b>	No (but alternatives are sought to facilitate access to the education and training system)	/

**Table 6a. Alternative assessment methods for applicants without (full) documentation of foreign qualifications in OECD countries, 2016 (cont.)**

	Alternative assessment methods for applicants without (full) documentation of qualifications	Type of alternatives
<b>Slovenia</b>	Yes	Notice providing information about their education (a comprehensive assessment procedure for applicants who lack documentation is being developed)
<b>Spain</b>	Yes	Granting more time obtain alternative forms of documentation
<b>Sweden</b>	Yes (for non-regulated professions)	Background sworn procedure resulting in an education description similar to, but not formally, a recognition statement; a pilot to assess qualifications of persons without document is underway
<b>Switzerland</b>	Yes	Validation of previous education
<b>Turkey</b>	Yes	Comparison of personal data and the information obtained from investigation
<b>United Kingdom</b>	Yes	Combination of related-information held, testing and interviews

Note: n.a. = information not available

**Table 6b. Language and translation issues with recognition of foreign qualifications in OECD countries, 2016**

	Languages in which applications are accepted for recognition	Availability of subsidies to cover or reimburse the costs of translation
<b>Australia</b>	English	No
<b>Austria</b>	German, English (depending on competent authority)	Possibility to cover translation costs up to a certain limit (no legal right)
<b>Belgium</b>	<ul style="list-style-type: none"> <li>• German, French, Dutch and English (In German-speaking community)</li> <li>• French (Wallonia)</li> </ul>	Yes (but only for beneficiaries of social benefits in German-speaking community)
<b>Canada</b>	English, French (depends on province)	No (but Canada committed to a permanent Foreign Credential Recognition (FCR) Loans Programme to cover costs associated with FCR )
<b>Chile</b>	Spanish	No
<b>Czech Republic</b>	<ul style="list-style-type: none"> <li>• Czech, Slovak, English (for vocational and academic qualifications)</li> <li>• Czech, Slovak (for basic, secondary and higher vocational education)</li> <li>• Czech (for professional qualifications)</li> </ul>	No

**Table 6b. Language and translation issues with recognition of foreign qualifications in OECD countries, 2016 (cont.)**

	Languages in which applications are accepted for recognition	Availability of subsidies to cover or reimburse the costs of translation
<b>Denmark</b>	Danish, English, Norwegian, Swedish, English, French, German, Spanish	Yes
<b>Estonia</b>	Estonian, English, Russian	No
<b>Finland</b>	Varies across competent authorities (Finnish, Swedish, Norwegian, Danish, Icelandic, English, French, Spanish, German at the Finnish National Board of Education)	No
<b>France</b>	Depends on the languages spoken by the staff of the recognition centre (French, German, English, Spanish, Italian, Portuguese and Arabic did not require translation in 2015)	No
<b>Germany</b>	German	Yes
<b>Greece</b>	Greek	No
<b>Hungary</b>	Hungarian and English (French and German for regulated professions)	
<b>Iceland</b>	Icelandic, English and Scandinavian languages	No
<b>Ireland</b>	English	
<b>Israel</b>	Hebrew, Arabic and English, Russian, Ukrainian	No (but this is planned)
<b>Italy</b>	Italian (some universities accept academic degrees in English, Spanish or French)	No
<b>Japan</b>	Japanese	No
<b>Korea</b>	Korean, English	Depends on institution
<b>Latvia</b>	Latvian (also English, Russian and other European languages are accepted for ordinary types of documents such as regular general secondary diplomas and higher education degrees)	No
<b>Lithuania</b>	English, Lithuanian, Russian (exceptions can be made for standard diplomas / transcripts in further languages)	No
<b>Luxembourg</b>	Luxembourgish, French, German, English	No
<b>Mexico</b>	Spanish	No
<b>Netherlands</b>	All languages	Yes
<b>New Zealand</b>	English	
<b>Norway</b>	Norwegian, Swedish, Danish, Finnish, Icelandic, English	No
<b>Poland</b>	Polish (English in exceptional cases)	No
<b>Portugal</b>	<ul style="list-style-type: none"> <li>• Portuguese for basic, lower-secondary and upper-secondary education</li> <li>• English, French, Italian, Spanish for applications for automatic recognition of higher education qualifications</li> <li>• Portuguese for higher education qualifications and professional qualifications in non-regulated professions</li> <li>• Varies for decisions about equivalence issued by Higher Education Institutions</li> </ul>	Translation is free of charge for immigrants because authorities provide for the official translation of documents
<b>Slovenia</b>	Slovenian, English, German, Croatian, Serbian, Bosnian, Chinese	Yes (for refugees and asylum seekers)
<b>Spain</b>	Spanish	Yes
<b>Sweden</b>	Swedish, Danish, English, Finnish, French, German, Icelandic, Norwegian, Spanish	Yes (for persons that are registered with the PES)

**Table 6b. Language and translation issues with recognition of foreign qualifications in OECD countries, 2016 (cont.)**

## Lesson 7

Engage employers and other relevant non-governmental stakeholders

**WHAT and WHY?** Employers have expert knowledge about skills in demand and about the level and type of information they look for when assessing educational and professional credentials. Engaging employers and generating buy-in from all relevant stakeholders is thus crucial to ensure that recognition procedures

are known and outcomes are widely accepted and meet employers' needs.

**WHO?** Employers and regulatory bodies are key stakeholders in any recognition system. Nevertheless, in most OECD countries, employers (especially in the non-regulated professions) play only a small, if any role in formal assessment and recognition mechanisms. Recognition partnerships should aim to include them further in the design and implementation of recognition policies. This is particularly appropriate in countries where the social partners play a strong role in labour market policy and integration, such as in Austria or Belgium.

**HOW?** In most countries, responsibility for recognition of foreign qualifications for the purpose of employment is spread across various actors including public recognition offices, regulatory authorities, state boards and employers or membership-based organisations, such as employer associations and professional boards. Frequently competence on recognition depends on whether or not a profession is regulated in the host-country.

In *non-regulated* professions, where a formal recognition statement is usually not required for employment, many immigrants do not bother to have their qualifications formally recognised. In this case, the decision of whether or not to “recognise” a foreign diploma depends on the discretion of individual employers and coincides with their decision to hire or not hire a candidate with foreign qualifications. In Canada, for example, it is up to the employer to determine when and how to assess an individual’s foreign qualifications in non-regulated professions. Employers are thus the competency evaluators for 80-85% of occupations that make up Canada’s non regulated labour market. Employers may choose to assess qualifications with support from education credential assessment bodies, professional associations, apprenticeship offices, or by themselves, depending on the person’s qualifications to be assessed.

Where a holder of foreign qualification in a non-regulated occupation wishes to obtain a formal recognition statement, the relevant body to contact is usually not the employer but a public credential evaluation agency, such as the NARIC offices that exist in many European OECD countries (see Lesson 8). Exceptions are

Australia, Germany, Lithuania and the United Kingdom, where employers are actively involved in the formal assessment and recognition of foreign qualifications in non-regulated professions (see Table 7).

Where access to jobs depends on the discretion of individual employers, the latter may benefit from accessing the rich pool of information generated by recognition bodies in their assessment and evaluation of qualifications from various contexts. Sharing this information with employers would improve the information flow and enhance transparency about the assessment of foreign qualifications. By making such information publicly available, recognition authorities offer resources that stakeholders can consult independently when in doubt about the value of a foreign qualification. OECD countries providing publicly accessible assessment databases include Australia (see Box 6a below), Germany and Denmark.

At the same time, employers themselves can provide valuable feedback about their workers with recognised qualifications. This may help to improve recognition procedures and can assure other employers. By doing so, it helps to grow trust in the reliability of recognition procedures.

#### **Box 6a. Databases on foreign qualifications in Australia and Germany**

Comprehensive databases about migrant-relevant country education systems (structure, framework, governance, quality-assurance procedures, public-private sector trends, and institutional status) can be easily updated and shared with employers. They are also of great value for employers and further recognition stakeholders in other countries.

##### ***Australia's Country Education Profiles***

The Australian National Office of Overseas Skills Recognition<sup>1</sup> shares Country Education Profiles online that provide information on how to place foreign qualifications within the Australian Qualifications Framework. They are intended to assist employers and higher education institutions in deciding whether to admit a candidate for employment or studies. To this end, every country profile provides assessment guidelines; a list of recognised institutions; a description of the education system; as well as other relevant information (such as grading standards, language of instruction, admission requirements, etc.). The country profiles also give advice on how to read a foreign diploma. There are currently country profiles covering 127 countries, focusing on higher education and post-secondary vocational qualifications. The profiles are only accessible to registered users and in exchange against a flexible subscription fee. (<https://internationaleducation.gov.au/Services-And-Resources/services-for-organisations/Pages/Services-for-organisations.aspx>).

1. AEI-NOOSR is part of the Department of Education, Science and Training and is the Australian NARIC, National Information Centre on Recognition. It provides official information and advice on the comparability of overseas qualifications with Australian qualifications, using the Australian Qualifications Framework (AQF) as a benchmark.

### Box 6a. Databases on foreign qualifications in Australia and Germany (*cont.*)

#### ***The BQ Portal in Germany***

In Germany, the BQ online portal provides individual employers and competent assessment bodies including the Chambers of Skilled Crafts with detailed and authoritative information regarding foreign vocational training systems in 76 countries, the substance and duration of 1 650 individual vocational training programmes and the legal basis on which these are offered. The platform also allows registered members of the Chamber of Skilled Crafts to add information thereby pooling all relevant information on foreign professional qualifications. With its collaborative approach the BQ-Portal ensures that the competent organisations draw on the same database and hence fosters transparency and consistency between the decisions made by the various chambers across the Federal Republic (<https://www.bq-portal.de/en/home>).

In *regulated* professions a formal recognition statement, a professional license or membership in a professional association is typically required to practice in the profession. Responsibility for such recognition or licensing commonly rests with regulatory authorities or state boards, but may also involve professional boards and employer associations and individual employers (see Table 7). In Denmark, Greece, Iceland, Sweden and Luxembourg employers are for example actively engaged in the recognition procedure via skills assessments or trial periods at the work place.

Employers can also play an active role in the recognition of prior learning, meaning the assessment of in-formal and non-formal learning that a person may have acquired abroad (see Lesson 4). The Netherlands provide an example of successful engagement with employers and social partners in this field. In some industrial branches, trade unions and employer organisations run Training and Development Funds (O&O-fondsen) to promote industrial training of employees. These funds are also used to assess skills and competencies of employees. Several sectors have established RPL procedures in consultation with employers, the social partners, sector organisations and vocational training institutions. In Denmark, the Ministry of Employment and the social partners jointly established regional knowledge centres for the assessment of skills and qualifications acquired abroad (see Box 6b).

### Box 6b. Employer involvement in skills assessment in Denmark

Employers are actively involved in the development of industry specific practical guidelines for RPL through vocational trade committees. Practical guidelines and manuals for RPL have been developed in various sectors including building and construction; trade, administration, communication and management; industry; kitchen, restaurant, bakery, pastry and meat industry; dairy and agriculture; metal industry; social and health; the services sector; the tree industry and transport. In addition, employers co-operate with VET schools and training centres offering RPL schemes when undertaking validation of RPL for example as part of their company’s continuing training for workers.

Employers can also use the initiative “My competence portfolio”, a digital tool helping immigrants to develop competence portfolios (see Box 3).

**Table 7. Employer involvement in the recognition procedure of foreign formal qualifications in OECD countries, 2016**

	Regulated occupations		Non-regulated occupations	
	Employer involvement	Type of involvement	Employer involvement	Type of involvement
<b>Australia</b>	Yes	Recognition authorities engage with employers and industry groups in determining the professional standards for recognition	Yes	Assessment authorities engage with employers to ensure that assessment standards are in line with AQF qualifications required for employment

## Lesson 8

Establish partnerships and networks for the transnational exchange of expertise and good practice in the area of recognition

**WHAT and WHY?** OECD countries dispose of a wealth of experience and expertise in the field of recognition and many face similar issues and challenges in terms of developing effective systems for the recognition of foreign qualifications and prior learning. There is thus a great potential to benefit from each other's experience by promoting transnational exchange of insights, evaluations of foreign

degrees and educational institutions, research findings, lessons learned, and examples of good practice.

**WHO?** Policy makers in charge of designing or reforming recognition systems, recognition practitioners, professional bodies and employers find it useful to learn about other countries' practices and experiences to inform their own approach. The potential for mutual learning is greatest where countries face common issues and challenges or share similar policy approaches.

**HOW?** Settlement destination countries for skilled migration such as Australia or Canada have revised and refined their recognition policy frameworks over years, accumulating considerable expertise and examples of good practice. Other countries have developed innovative policy tools that they could share. Canada and Australia, for instance, are already working together to improve the recognition of foreign qualifications. Both countries maintain federal political systems, meaning that different agencies and jurisdictions govern recognition processes. They have recognised shared challenges and the potential for mutual learning. Since 2011 Australia and Canada have organised two transnational round table events (the Australia-Canada Roundtables on Foreign Qualification Recognition) that gave a wide range of stakeholders a chance to exchange expertise.

Another example of transnational exchange and collaboration on issues of recognition is provided by the European Union. In 1984, the European Commission created the NARIC (National Academic Recognition Information Centres) network that aims to improve academic recognition of tertiary degrees and periods of study within the European Union, the EEA and Turkey.<sup>11</sup> All member countries have NARIC centres that inform and advice higher education institutions, students and academics about foreign education systems, qualifications and recognition procedures. They also co-operate in related matters with other information centres, higher education institutions, their networks and other relevant actors in the national context. In some countries, the NARICs have an advisory role but do

not conduct assessments themselves as these fall under the auspice of higher education institutions.

The European Recognition Manual is a further tool that aims to create more clarity regarding recognition practices in the European region. Based on the Lisbon Recognition Convention (see Lesson 9) the manual provides commonly agreed standards and guidelines to enable credential evaluators and higher education institutions in all European countries to practice a similar methodology in the recognition of qualifications. Separate manuals have been developed for higher education and for professional recognition including specific guidelines on how to handle cases of undocumented qualifications. Recently the manual has been complemented by an online training and exchange forum for practitioners on recognition (see Box 7).

In countries with a federal structure, partnerships and networks can also serve as a mechanism for information sharing among federal and regional governments. An example is the Foreign Qualification Recognition Working Group<sup>12</sup> in Canada, which was established by the Forum of Labour Market Ministers to support the implementation of a Pan-Canadian Framework for the Assessment and Recognition of Foreign Qualifications. The FQRWG strengthens collaboration and horizontal linkages between federal and provincial governments, regulatory bodies and national professional associations to facilitate the exchange of information and share best practices and tools through various formats including roundtables, committee meetings, conferences and workshops.

### **Box 7. STREAM – An online platform for training and exchange of credential evaluators at higher education institutions**

The European project “Streamlining Institutional Recognition: a Training Platform for Admissions Officers” (STREAM) envisages to streamline region-wide recognition processes and enhance knowledge of good practice in recognition.

STREAM targets admissions officers working in Higher Education Institutions in the European Higher Education Area (EHEA). It provides concise training materials, based on the EAR-HEI manual, including various examples and exercises from daily recognition practice. Members can also use the “real cases forum” to post questions on specific cases and ask advice from peers throughout Europe. Participation is free of charge. In March 2016 the platform had over 750 users.

## Lesson 9

Expand bilateral and multilateral agreements on the assessment and recognition of foreign qualifications

**WHAT and WHY?** Apart from sharing expertise and good practice, OECD countries can improve skills mobility through bilateral and multilateral agreements on the assessment and recognition of foreign qualifications. Such agreements save time and resources, and allow highly skilled migrants to start working immediately after arrival without any delay caused by outstanding

recognition requirements. For example, based on a mutual recognition agreement, Canadian registered doctors can take up supervised work placements in Australia immediately after arrival (prior to obtaining full registration) without having to pass any additional examination (Schuster et al., 2013). Doctors who were trained in Australia do have to pass an examination in order to practice in Canada, but their pass rates are generally high.

**WHO?** Transnational recognition agreements have benefits for immigrants who aim to work in a regulated profession but are less relevant to immigrants trained in non-regulated professions where the access to jobs depends on the discretion of individual employers. Mutual agreements covering higher education degrees benefit immigrants who intend to take up or continue higher education in the destination country and immigrants qualified for non-regulated professions.

**HOW?** Within the OECD there are many examples of bilateral agreements (see Table 8). These include for example the 1996 Trans-Tasman Mutual Recognition Arrangement between Australia and New Zealand and the 2008 France-Quebec agreement on the mutual recognition of professional qualifications. In 2010, Ireland and Australia explored the possibility of formally aligning the Irish National Framework of Qualifications (NFQ) with the Australian Qualifications Framework (AQF) and concluded that such an alignment was possible in the future to enhance mutual recognition between both countries.

A prominent example of multilateral collaboration in the field of recognition is provided by the European Union. In 2007, the Directive EC/2005/36 on the Recognition of Professional Qualifications in the European Union established the automatic recognition of the basic qualifications required for the practice of medicine, dentistry, general care nursing, midwifery, veterinary surgery, pharmacy and architecture in the EU's internal market (see Lesson 1). A further multilateral agreement is the 2011 Asia-Pacific Regional Convention on the Recognition of Qualifications in Higher Education. Along similar lines, in 1997, the Council of Europe proposed the Lisbon Convention on the Recognition of Qualifications

concerning Higher Education in the European Region that has since been signed by almost 50 countries including European countries as well as Australia, Canada and the United States.<sup>6</sup> The Convention facilitates the transferability of academic qualifications and aims to improve recognition procedures and make them more transparent. Further region specific agreements exist in the APEC, ASEAN, CAMES and NAFTA region. At the global level, UNESCO is currently working on a Global Convention on the Recognition of Higher Education Qualifications to facilitate academic mobility, improve quality and enhance international co-operation in higher education. A first draft of the Convention will be reviewed at the UNESCO General Conference in November 2017.

Transnational recognition can also be agreed between regulatory bodies. In 2013, for instance, the two regulatory bodies for accountants in Australia and Canada and the umbrella organisations for engineers in both countries renewed their existing mutual recognition agreements. While these arrangements are not legally binding, they still improve the mobility of professionals within specific occupations across countries. Another field-specific international agreement is the Washington Accord. Signed in 1989 among bodies responsible for accrediting engineering degree programmes it recognises the substantial equivalency of programmes accredited by those bodies and recommends that graduates of programmes accredited by any of the signatory bodies be recognised by the other bodies as having met the academic requirements for entry to the practice of engineering.

Divergent content and quality of education systems can be an obstacle to the use and effectiveness of international co-operation in this field. Indeed, the most far-reaching agreements generally concerned countries where quality differences are perceived as small. To fully exploit the benefits of international co-operation in this field, there is hence a need for more stringent systems for international quality assurance and international accreditation systems.

## Lesson 10

Make sure that costs do not represent a barrier

**WHAT and WHY?** Assessment procedures and bridging courses should be available to all holders of foreign qualifications, independent of their financial means, in order to be equitable and non-discriminatory. However, applicants are

usually required to pay a fee when applying for an assessment. Fees for recognition of formal qualifications vary substantially by country and field and may range anywhere between EUR 16-EUR 48 in Mexico to several thousand euros in Australia. Fees for the recognition of prior learning (RPL) differ similarly ranging between a mere stamp duty of EUR 25 in Luxembourg to more than one thousand euros in some cases in countries like Germany, France, the Netherlands and Sweden (see Table 9). The costs of bridging courses may also be difficult to afford, particularly if the measure lasts several months or years during which the applicant cannot work full time.

High costs discourage immigrants from applying especially if they are unsure about the chances of success. In such cases, financial support is needed to ensure that assessment procedures and bridging courses are accessible and equitable.

**WHO?** Migrants who are unemployed (and fulfil some additional requirements) often have access to financial support and subsidies from the public employment service, enabling them to participate in retraining or up-skilling schemes (see Table 9 below). However, those who are working, albeit in a job below their level of qualification, are usually not eligible for public support. For these migrants, dedicated government initiatives are the only chance to obtain financial assistance to fund assessment procedures or bridging courses.

**HOW?** To ensure that costs do not represent a barrier countries can either wave fees altogether and offer assessment services free of charge or they can provide financial assistance to reimburse those who cannot afford to pay for the service themselves. Where financial support is not available, anecdotal evidence suggests that some recognition bodies encourage applicants to withdraw their applications if chances for success appear low so that they can save the fees that would otherwise be due if the application was fully processed. However, this leads to a downward bias in rejection statistics, as unpromising applications are withdrawn without entering official statistics.

A range of OECD countries such as Denmark, Iceland, Israel, the Netherlands, Norway, Poland, Portugal and Sweden offer most or certain types of assessment procedures free of charge. The same is true for RPL services, which are usually free of charge in the Nordic countries, Israel, Portugal and Turkey. Where assessments

are subject to a fee, subsidies are available in various countries including for example Austria, Belgium, Denmark, Germany, Hungary, and Slovenia. Frequently, eligibility to subsidies is limited to particular groups such as the unemployed in Germany and Sweden or persons with refugee status in New Zealand and Mexico (see Table 9).

In addition to the assessment itself some countries also subsidise other costs related to the assessment, such as translation fees (see Table 6b in Lesson 6). The Canadian Government, for example, committed to make its Foreign Credential Recognition (FCR) Loans Program permanent in order to reduce barriers to credential recognition for newcomers. The FCR Loans Program builds on the success of a FCR Loans Pilot that ran from 2012-2015 and demonstrated that FCR loans can accelerate the recognition process for newcomers as well as improve their employment outcomes and earnings. Through contributions funds, third-party organisations guarantee loans offered by financial institutions to highly skilled newcomers to cover costs associated with foreign credential recognition, such as qualification assessments, association and exam fees, books and course materials, short-term bridge training, travel expenses and living allowances.

A further example of a practice intended to enable migrants with limited financial means to benefit from recognition opportunities and bridging courses is provided by Germany. In Germany, job centres can cover the costs for recognition procedures and, if required, adaption periods and further training measures for unemployed persons. Moreover, in November 2016, the federal government started a programme that provides financial assistance for the costs of recognition procedures up to a maximum of EUR 600 (covering for example fees, translation costs, etc.). It is limited to applicants with low income and no other support from public means. In addition, funding initiatives have been developed at the regional level. An example is the city of Hamburg, which has launched a scholarship scheme that provides financial assistance to immigrants who must pass a bridging course in order to obtain recognition of their foreign qualification or a certificate of equivalence. The volume of available funding corresponds to the government-funded study loan “BAföG” which is half loan, half scholarship. Funding can be granted for a maximum of 36 months and is paid monthly. Applicants can also receive subsidies for fees and study material. The scholarship is available to persons with foreign qualifications who are unemployed or have a job below their skill level, who would like to work in Hamburg and require recognition of certificate or an equivalence to do so. To be eligible, migrants must be residents of Hamburg, have a valid residence permit, and earn not more than EUR 26 000 per year.

Last but not least, employers can take a stance in financing recognition procedures for their employees. Indeed, the potential gains from a person working at the right skill level will benefit them, as much as society in general.

**Table 9. Costs for recognition of foreign qualifications and prior learning in OECD countries, 2016**

	Official costs (or cost range) charged to applicants for ...		
	Recognition of foreign qualifications		Recognition of prior learning (RPL)
	Fee	Subsidies	
<b>Australia</b>	<ul style="list-style-type: none"> <li>• Up to EUR 6 160 (academic degrees)</li> <li>• Up to EUR 2 530 (non-tertiary degrees)</li> </ul>	No	Varies (subsidies available)
<b>Austria</b>	<ul style="list-style-type: none"> <li>• Up to EUR 350 in regulated professions</li> <li>• EUR 150 recognition fee for academic degrees in non-regulated professions</li> <li>• EUR 40 - EUR 60 for assessment + EUR 150 recognition fee for apprenticeships in non-regulated professions (certificates of equivalence)</li> </ul>	Yes (refund of costs for assessment and recognition incl. translations of up to EUR 500 per person)	/
<b>Belgium</b>	<i>In German-speaking community:</i> Free of charge <i>In Wallonia:</i> EUR 200	Reduced fees (EUR 150) in Wallonia for applicants from an ODA receiving country	<i>In German-speaking community:</i> <ul style="list-style-type: none"> <li>• EUR 35 (for jury in regulated professions)</li> <li>• EUR 13 - EUR 38 (for examination board for secondary education)</li> <li>• EUR 200 (mastership examination)</li> </ul> <i>In Wallonia:</i> Free of charge
<b>Canada</b>	Vary	No (loan-pilots have been used)	Vary (subsidies available)
<b>Chile</b>	Free of charge		On average EUR 200 (subsidies available)
<b>Czech Republic</b>	<ul style="list-style-type: none"> <li>• Free of charge (academic degrees)</li> <li>• EUR 37 (basic, secondary, higher vocational education in non-regulated occupations)</li> <li>• EUR 74 (non-tertiary qualifications in regulated occupations)</li> </ul>	No	Vary by profession (depend on the costs of professional qualification exams)
<b>Denmark</b>	<ul style="list-style-type: none"> <li>• Free of charge in non-regulated professions</li> <li>• Varying fees in regulated professions (e.g. EUR 168 for gas, plumbing and sanitation fitters and EUR 162 for medical doctors)</li> </ul>	Yes	Free of charge
<b>Estonia</b>	Free of charge	/	n.a.
<b>Finland</b>	EUR 213 - EUR 340 (at the National Board of Education)	No (but some projects/services may cover costs)	Mostly free of charge in the education system
<b>France</b>	• EUR 70	No (free of charge for refugees)	EUR 300 - EUR 2 000 (typically EUR 1 000 for an ISCED-5 level diploma ("licence"))

**Table 9. Costs for recognition of foreign qualifications and prior learning in OECD countries, 2016 (cont.)**

	Official costs (or cost range) charged to applicants for ...		
	Recognition of foreign qualifications		Recognition of prior learning (RPL)
	Fee	Subsidies	
<b>Germany</b>	<ul style="list-style-type: none"> <li>Usually EUR 100 - EUR 600 for regulated and non-regulated professions</li> <li>EUR 200 for a certificate of equivalence for academic qualifications in non-regulated professions</li> </ul>	Yes (for unemployed; in addition some regions offer voluntary financial support)	Approx. EUR 300 - EUR 1 200 (depending on the occupation and the examination regulations of the competent authorities)
<b>Greece</b>	<ul style="list-style-type: none"> <li>EUR 100 for recognition of professional or non-tertiary qualifications</li> <li>EUR 184 - EUR 415 for academic qualifications (EUR 230 for undergraduate level; EUR 184 for postgraduate level or doctorate; EUR 369 for post-graduate and doctorate; EUR 415 for under- and postgraduate)</li> </ul>	No	EUR 50 per certification examination (total costs for RPL may be higher depending on professional area and organisations involved)
<b>Hungary</b>	<ul style="list-style-type: none"> <li>EUR 357 (academic degrees)</li> <li>EUR 268 (non-tertiary qualifications)</li> </ul>	Yes	/

*Source:* OECD questionnaire on the assessment and recognition of foreign qualifications 2016

## Notes

1. Note that the latter percentages are not overqualification rates, which are calculated as the share of highly-educated in employment who work in low-skilled jobs. Instead, they refer to the share of all high-educated who are working in low-skilled jobs.
2. Obviously, establishing a right to a procedure does not imply that the procedure is provided free of charge.
3. In some countries, the possibility to have foreign qualifications recognised exists only for certain types of qualifications or in particular fields. In Japan, for example, where there is no systematic recognition framework in place, academic qualifications may be recognised by Higher Education Institutions for the purpose of further study. However, this depends on the institution. Further recognition options exist for nurses and caretakers from Indonesia, the Philippines and Vietnam and for foreign doctors, dentists and nurses after passing an individual assessment and successfully sitting the Japanese national examinations. In Korea, recognition options exist only for qualifications covered by mutual recognition agreements; other qualifications can be verified but not recognised.
4. Directive 2013/55/EU of the European Parliament and of the Council of 20 November 2013 amending Directive 2005/36/EC on the recognition of professional qualifications facilitates recognition of foreign qualifications among EU and EEA member countries. It covers regulated EU/EEA professional qualifications held by EU/EEA nationals and their families. Under certain conditions, specific groups of non-EU/EEA migrants, such as scientific researchers, EU Blue Card holders, long-term residents and refugees enjoy the same rights as EU nationals with regard to the recognition of diplomas, certificates and other professional qualifications.
5. The Federal Ministry of Education and Research publishes the results of the monitoring of the implementation of the Federal Recognition Act in an annual

report, which can be downloaded here: [https://www.anererkennung-in-deutschland.de/html/de/daten\\_und\\_berichte.php](https://www.anererkennung-in-deutschland.de/html/de/daten_und_berichte.php)

6. The Lisbon Recognition Convention establishes a right to an assessment of higher education that was obtained in one of the signatory countries or is held by refugees. In reverse, it generally does not cover non-tertiary education qualifications and does not apply to migrants with qualifications from non-signatory countries who migrated for other than humanitarian reasons. The Convention applies to recognition of qualifications required for admission to higher education and to recognition of part of (units or courses constituting part of) higher education study programmes.
7. Depending on the type of education to be evaluated, recognition may take place at various levels within a higher education institution. For example, credits earned during periods of studies abroad may be recognised at the faculty level, while entire degrees may be evaluated by a central office (Nuffic, 2016).
8. In the European context, the development of RPL systems is encouraged by the 2012 Council Recommendation on the validation of non-formal and informal learning. The Recommendation asks EU countries to put in place, by 2018, arrangements to enable individuals to have their knowledge, skills and competences acquired via non-formal and informal learning validated, and to be able to obtain a full or partial qualification on the basis of informal or non-formal skills and competencies (Council of the European Union, 2013:C398/3). The European Commission supports EU countries and stakeholders in this process, including by regularly reviewing the European Inventory on the validation of non-formal and informal learning, in cooperation with member countries (European Commission; Cedefop; ICF International, 2014).
9. For further information see <http://www.citizenship.gov.on.ca/english/keyinitiatives/bridgetraining/nursing.shtml>.
10. From a legal point of view, the Lisbon Recognition Convention provides an important tool to encourage access to recognition procedures for persons with undocumented qualifications.
11. National information centres exist also for UNESCO Europe and Council of Europe countries. The ENIC centres implement the Lisbon Recognition Convention and develop policy and practice for the recognition and mobility of

academic qualifications. The ENIC Network cooperates closely with the NARIC Network of the European Union.

12. As of April 1, 2017, the “Foreign Qualification Recognition Working Group” is merged with another group and called “Mobility Qualification Recognition Working Group” (MQRWG).

## Annex A

**Table A.1. Documents resulting from recognition procedures in OECD countries, 2016**

Documents resulting from the recognition procedure	
<b>Australia</b>	<ul style="list-style-type: none"> <li>• Certificate of equivalence with a domestic degree/qualification (for academic, vocational, regulated and non-regulated degrees)</li> <li>• Offshore Technical Skills Record (OTSR) (for vocational degrees in certain regulated trade occupations)</li> <li>• Statement of Attainment (for vocational degrees)</li> <li>• Host country degree (for academic, vocational, regulated and non-regulated degrees)</li> </ul>
<b>Austria</b>	<ul style="list-style-type: none"> <li>• Host country degree for academic degrees in regulated professions (<i>Nostrifizierung</i>) and for vocational (school-based) diplomas in regulated and non-regulated professions (<i>Nostrifikation</i>)</li> <li>• Certificate of equivalence with a domestic degree for apprenticeships in non-regulated professions (<i>Gleichhaltung</i>)</li> <li>• Legally-binding certificate of partial recognition or equivalence with a domestic degree (possible outcome for all kinds of degrees/diplomas)</li> </ul>
<b>Belgium</b>	
<b>Canada</b>	<p>Varies by occupation/assessing body and province/territory. Examples include:</p> <ul style="list-style-type: none"> <li>• Certificate of equivalence indicating the Canadian credential equivalency</li> <li>• Notification of partial recognition and list of requirements to complete certification/licensure</li> <li>• License or certificate to practice in a particular jurisdiction</li> <li>• Recognition of skills and experience for non-regulated occupations is done by employers and does not generally lead to any formal documentation of recognition</li> </ul>
<b>Chile</b>	<ul style="list-style-type: none"> <li>• Host country degree</li> <li>• Convalidation with regards to training level (certificate of equivalence between curricular activities completed at a foreign higher education institution and those of a domestic university)</li> </ul>
<b>Czech Republic</b>	<ul style="list-style-type: none"> <li>• Legally-binding certificate of partial or full recognition of the equivalence of a foreign school report (for basic, secondary and higher vocational education)</li> <li>• Legally binding decision on partial or full recognition of higher education qualifications (for tertiary level qualifications)</li> <li>• Decision on the recognition of professional qualifications (for professional qualifications)</li> </ul>
<b>Denmark</b>	<ul style="list-style-type: none"> <li>• Legally binding decision of (full or partial) recognition for access to further education and for determining salaries in public positions</li> <li>• Certificate of equivalence with a domestic degree for labour market purposes in the private sector</li> <li>• Both documents are issued for all types of formal qualifications from compulsory school over VET qualifications to phd-degrees</li> </ul>

**Table A.1. Documents resulting from recognition procedures in OECD countries, 2016**  
(*cont.*)

<b>Documents resulting from the recognition procedure</b>	
<b>Estonia</b>	<ul style="list-style-type: none"> <li>• Certificate of full equivalence with a comparable domestic degree granting access to practice in a regulated profession (for academic qualifications)</li> <li>• Statement of full recognition granting access to practice in the comparable profession in Estonia (for holders of foreign professional qualifications if the profession is regulated by law in the origin country or if the holders has ten years of work experience in this qualification)</li> <li>• Statement of partial recognition (for holders of foreign professional qualifications that do not correspond to the required educational level in Estonia)</li> </ul>
<b>Finland</b>	<ul style="list-style-type: none"> <li>• Legally binding decision based on national legislation for qualifications in regulated professions (at the FNBE this grants eligibility to practice in a regulated profession, at other competent authorities decisions may grant permission to use a protected occupational title)</li> <li>• Recognition of the level of a foreign qualification (for labour market purposes for qualifications in non-regulated professions at the FNBE)</li> <li>• Admission to a study programme (for study purposes for higher education qualifications at Higher Education institutions)</li> </ul>
<b>France</b>	<ul style="list-style-type: none"> <li>• Non-binding comparability statement (for higher, secondary and professional secondary education qualifications in non-regulated professions)</li> <li>• Licence to practice in a regulated profession or registration in a professional order (for qualifications in regulated professions)</li> </ul>
<b>Germany</b>	<ul style="list-style-type: none"> <li>• Legally-binding certificate of partial or full recognition with a domestic degree for all qualifications except for academic qualifications in non-regulated professions</li> <li>• Certificate of equivalence with a domestic degree (for academic qualifications in non-regulated professions)</li> </ul>
<b>Greece</b>	<ul style="list-style-type: none"> <li>• Certificate of recognition of professional qualifications or non-tertiary qualifications from an EU country</li> <li>• Certificate of equivalence with a domestic degree (for academic qualifications)</li> <li>• Certificate of recognition of professional/ non tertiary qualifications from third countries</li> </ul>
<b>Hungary</b>	<ul style="list-style-type: none"> <li>• Legally-binding certificate of partial or full recognition with a domestic degree</li> <li>• Certificate of equivalence with a domestic degree</li> </ul>
<b>Iceland</b>	<ul style="list-style-type: none"> <li>• A licence granting a legal right to practice in a given regulated profession in Iceland (for regulated professions)</li> <li>• An assessment of equivalence for academic professions</li> </ul>
<b>Ireland</b>	Downloadable statement of comparability based on the Irish National Framework of Qualifications (not legally binding, nor individualised)
<b>Israel</b>	Legally binding certificate
<b>Italy</b>	<ul style="list-style-type: none"> <li>• Host-country degree (for academic degrees)</li> <li>• Legally-binding certificate of full or partial recognition (for professional qualifications)</li> <li>• Certificate of equivalence (for access to public examinations)</li> </ul>
<b>Japan</b>	<ul style="list-style-type: none"> <li>• Host country degree, licences and documents certifying sufficient ability of Japanese language, etc. (for nurses and caretakers from Indonesia, the Philippines and Vietnam, and foreign doctors, dentists and nurses)</li> <li>• n.a. (higher education degrees)</li> </ul>
<b>Korea</b>	<ul style="list-style-type: none"> <li>• Domestic qualification (for professional engineers)</li> <li>• Certificate of authentication from National Research Foundation (for verification of qualifications)</li> </ul>

**Table A.1. Documents resulting from recognition procedures in OECD countries, 2016**  
(*cont.*)

<b>Documents resulting from the recognition procedure</b>	
<b>Latvia</b>	<ul style="list-style-type: none"> <li>• Statement of comparability with a domestic degree/educational document (for study purposes and for work in non-regulated professions for all levels of qualifications)</li> <li>• Legally binding decision on recognition or partial recognition including information what a person should do to get full recognition (for qualifications in regulated professions)</li> </ul>
<b>Lithuania</b>	<ul style="list-style-type: none"> <li>• Legally-binding certificate of partial recognition of a part of a person's qualifications or diploma certifying a certain qualification (for vocational training)</li> <li>• Recommendation to employers, higher education and other institutions regarding the comparability of a foreign qualification</li> <li>• Legally-binding recognition statements of partial or full recognition or recognition with additional requirements (for foreign higher education qualifications concerning higher education) for individuals seeking study and/or employment</li> </ul>
<b>Luxembourg</b>	<ul style="list-style-type: none"> <li>• Legally-binding certificate of partial or full recognition with a domestic degree (in regulated professions after completing additional competence requirements and for professions covered by the EU Professional Qualifications Directive)</li> <li>• Certificate of equivalence with a domestic degree (through the "homologation" procedure at the Ministry of Higher Education)</li> </ul>
<b>Mexico</b>	Legally-binding certificate of partial or full recognition with a domestic degree (" <i>revalidacion</i> " document)
<b>Netherlands</b>	<ul style="list-style-type: none"> <li>• Statement of credential evaluation indicating the most comparable domestic qualification (for formal qualifications in regulated and non-regulated professions)</li> <li>• Indication of level of education (for refugees without documentation of their qualification)</li> <li>• Legally binding recognition statement issued by a competent authority (for professional recognition of qualifications in regulated professions)</li> </ul>
<b>New Zealand</b>	Statement of Comparability to the New Zealand Qualifications Framework
<b>Norway</b>	<ul style="list-style-type: none"> <li>• Legally-binding general certificate of recognition of obtained domestic degree level without reference to subjects and grades (for academic degrees in regulated and non-regulated professions)</li> <li>• Legally-binding certificate of recognition of a domestic degree issued by a higher education institution and with reference to discipline(s) or of part of such degree (for academic degrees in regulated and non-regulated professions)</li> <li>• Legally-binding certificate of recognition of comparability with a domestic craft and journeyman's certificate within the qualifications carpenter, hairdresser, industrial concrete worker, meat cutter and plumber</li> <li>• Admission to study programmes or modules or documentation of partial recognition of study programmes</li> <li>• Authorisation or recognition for regulated profession</li> </ul>
<b>Poland</b>	<ul style="list-style-type: none"> <li>• Legally-binding certificate of partial or full recognition with a domestic degree (issued by universities after nostrification procedure for higher education qualifications)</li> <li>• Certificate of equivalence with a domestic degree (issued by ministries in case of international recognition agreements for higher education)</li> <li>• Non-legally binding recognition statements issued by NARIC (for higher education qualifications)</li> </ul>

## **ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT**

The OECD is a unique forum where governments work together to address the economic, social and environmental challenges of globalisation. The OECD is also at the forefront of efforts to understand and to help governments respond to new developments and concerns, such as corporate governance, the information economy and the challenges of an ageing population. The Organisation provides a setting where governments can compare policy experiences, seek answers to common problems, identify good practice and work to co-ordinate domestic and international policies.

The OECD member countries are: Australia, Austria, Belgium, Canada, Chile, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Japan, Korea, Latvia, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, the Slovak Republic, Slovenia, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The European Union takes part in the work of the OECD.

OECD Publishing disseminates widely the results of the Organisation's statistics gathering and research on economic, social and environmental issues, as well as the conventions, guidelines and standards agreed by its members.

# Making Integration Work

## ASSESSMENT AND RECOGNITION OF FOREIGN QUALIFICATIONS

The OECD series Making Integration Work draws on key lessons from the OECD's work on integration. The objective is to summarise in a non-technical way the main challenges and good policy practices to support the lasting integration of immigrants and their children for selected key groups and domains of integration. Each volume presents ten lessons and examples of good practice, complemented by synthetic comparisons of the integration policy frameworks in OECD countries. This second volume deals with the assessment and recognition of foreign qualifications.
